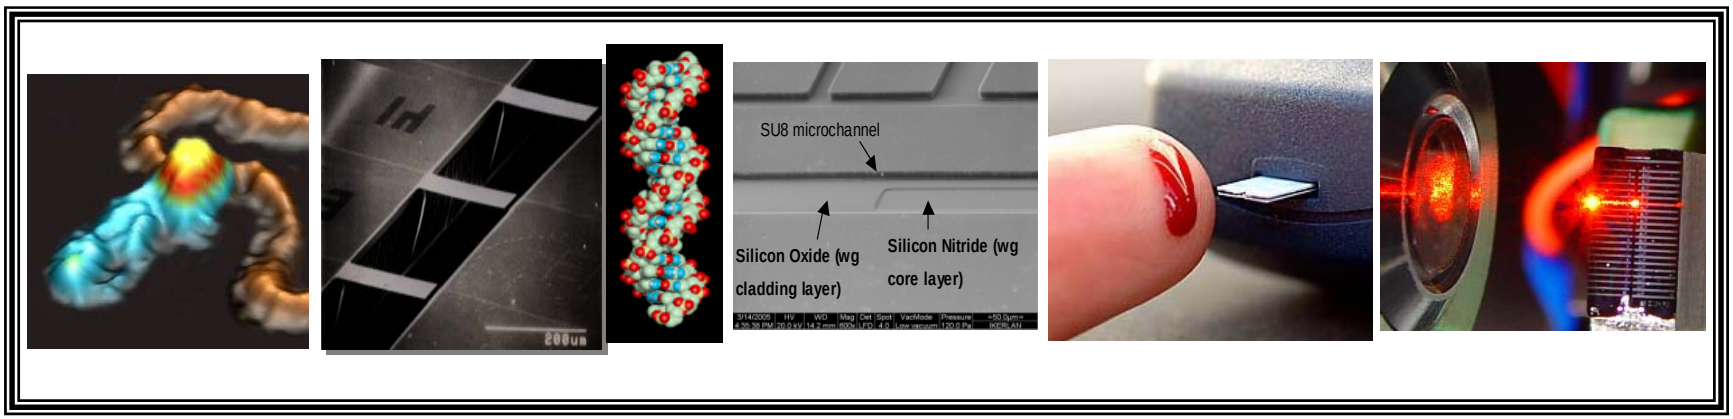
“Lab-on-a-chip” nanobiosensor platforms for real-time and early diagnostic of diseases



Prof. Laura M. Lechuga

Nanobiosensors and Molecular Nanobiophysics Group
Reseach Center on Nanoscience and Nanotechnology **(CIN2: CSIC-ICN)**
CIBER on Bioengineering, Biomaterials and Nanomedicine **(CIBER-BBN)**
Barcelona (Spain)

Research Centre on Nanoscience and Nanotechnology

CIN2 (CSIC-ICN)

(Campus UAB, Barcelona, Spain)

- Building will be ready in summer 2009. Fully running at the end´09
- 13 Research Groups running, more than 150 people. Centre for 250 persons. 6000 $m^{2.}$
- Acess to the largest Clean Room in Spain (CNM-CSIC) with nanotech area.

MULTIDISCIPLINARY RESEARCH

- **Nanoionics, nanooptics, nanomagnetism**
- **Synthesis of nanoparticles**
- **Surface nanostructuring**
- **Nanoestructured hybrid materials**
- **Transport in nanoentities (CNT)**
- **Nanobiosensors, Nanobiophysics**
- **Nanotechnology for energy**
- **Toxicity of Nanotechnology**
- **Common research with ALBA synchrotron**

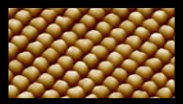
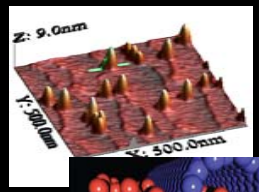
Outline

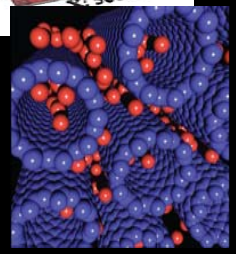
- Introduction: Nanomedicine, Nanodiagnostics, Biosensors
- Nanobiosensors for diagnostics
  - Plasmonic sensors
  - Integrated Nanophotonic sensors
  - Nanomechanical sensors
- Lab-on-a-chip microsystems
- Applications: Early detection of cancer
- Future perspectives

PROSPECTS IN NANOTECHNOLOGY

MATERIALS

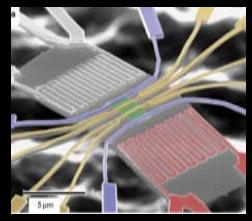






CNTs, NPs
Nanowires
Nanoparticles
Graphene
Nanocomposites
Qdots

ELECTRONICS



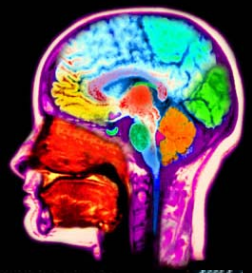
Molecular electronics

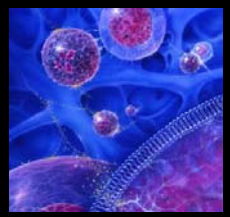
Nanochips

Wereable electronics

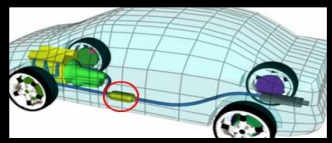
MP3, GPS

MEDICINE





ENERGY



Fuel cells

Solar cells

Bateries

Ultracapacitors

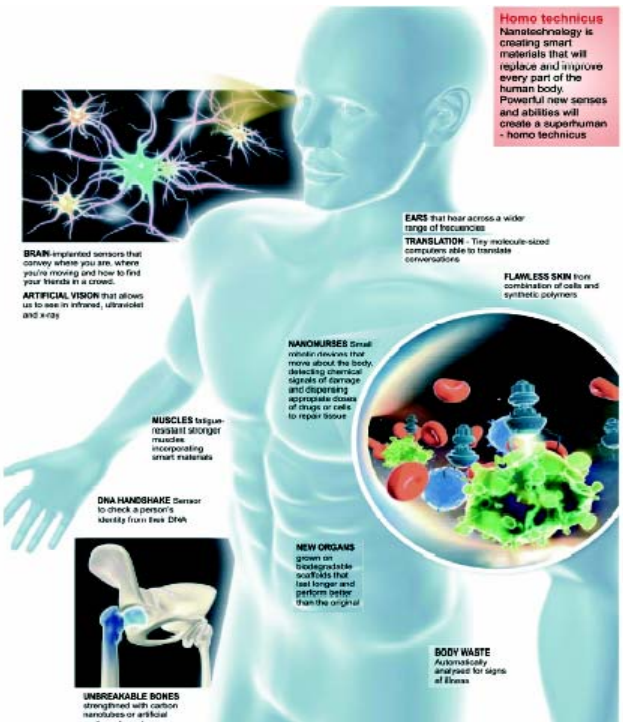
Boeing, 2008

What is Nanomedicine?

Application of materials, devices and process from Nanotechnology to develop nano-sized tools for the diagnosis, prevention and treatment of diseases, mainly at the initial stage.

Nanomedicine

- **Nanodiagnostics:** Nanosensors, imaging
- **Targeted Drug Delivery**
- **Regenerative Medicine:** Gene Therapy, Cell Therapy, Tissue Engineering

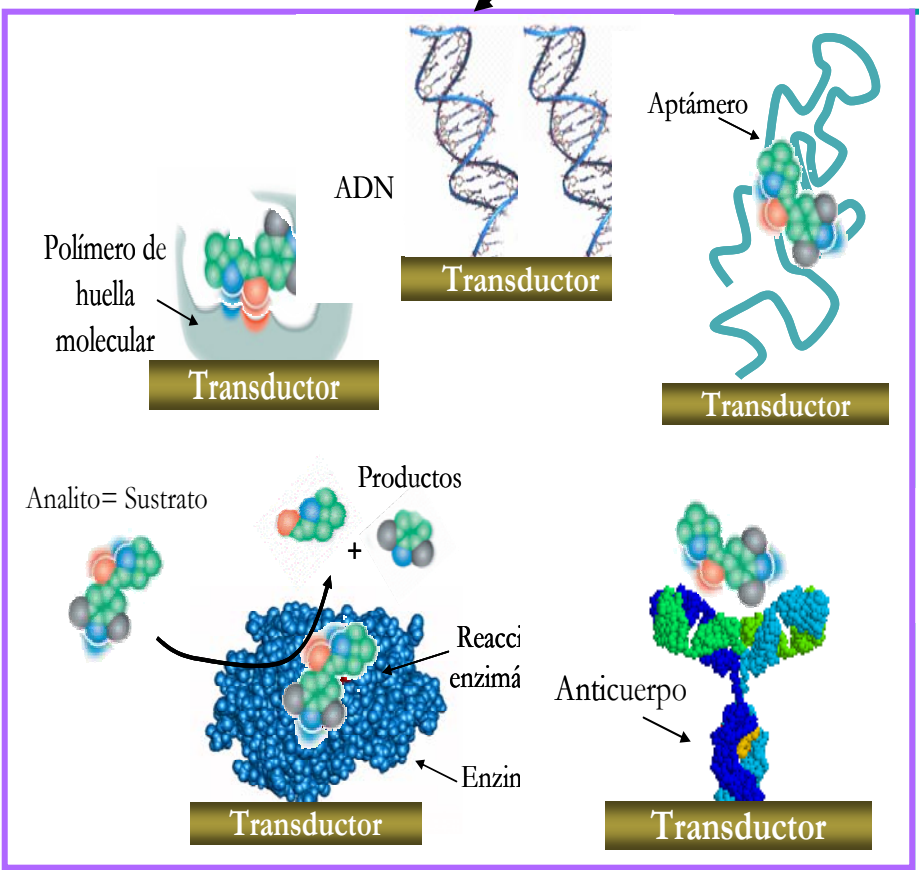


To improve the prevention, diagnosis and therapy in Human Health

"Find, fight and follow"

The ultimate goal is to improve the quality of life

BIOSENSOR DEVICE



ELECTROCHEMICAL
- amperométricos
- potenciométricos
- conductométricos

→ ✓Sensibles
✓ Miniaturización y multiplexado
✕ Mediadores para amplificar la señal

OPTICAL
- absorption
- fluorescence
- **evanescent wave**

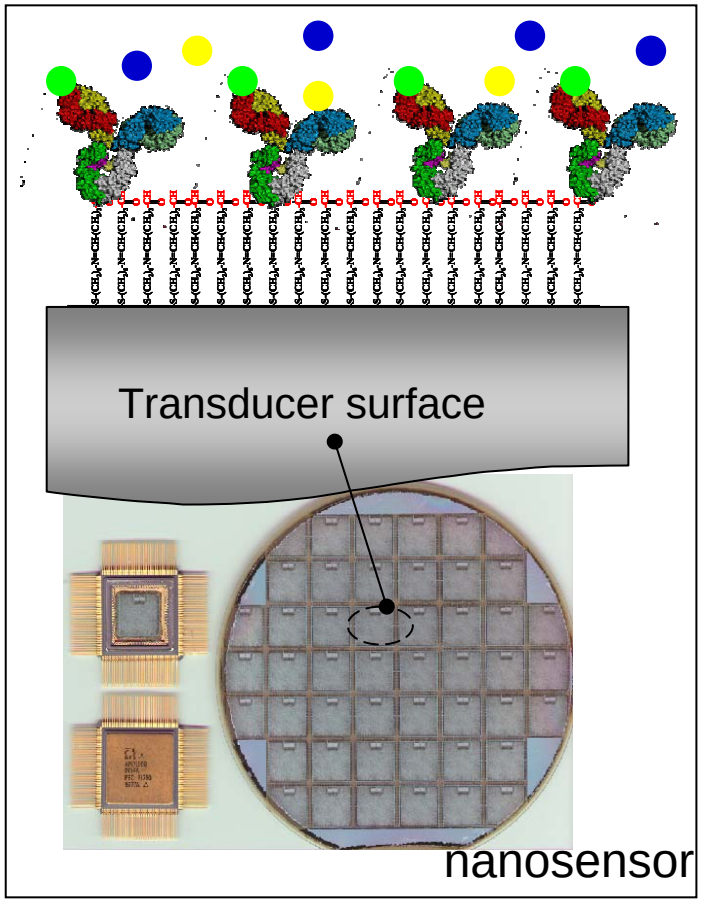
→ ✓ Altamente sensible
✓ Técnica robusta y reproducible
✓ Alta capacidad de multiplexado y miniaturización

MECHANICAL
- piezoelectric
- **nanomechanical**

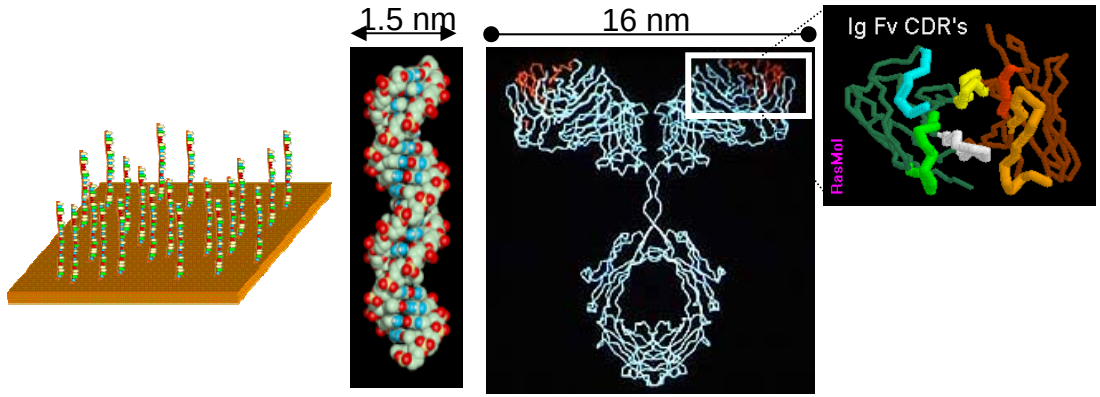
→ ✓ Sensibles
✓ Miniaturización y multiplexado
✕ Principio de funcionamiento poco establecido

NANOBIOSENSORS

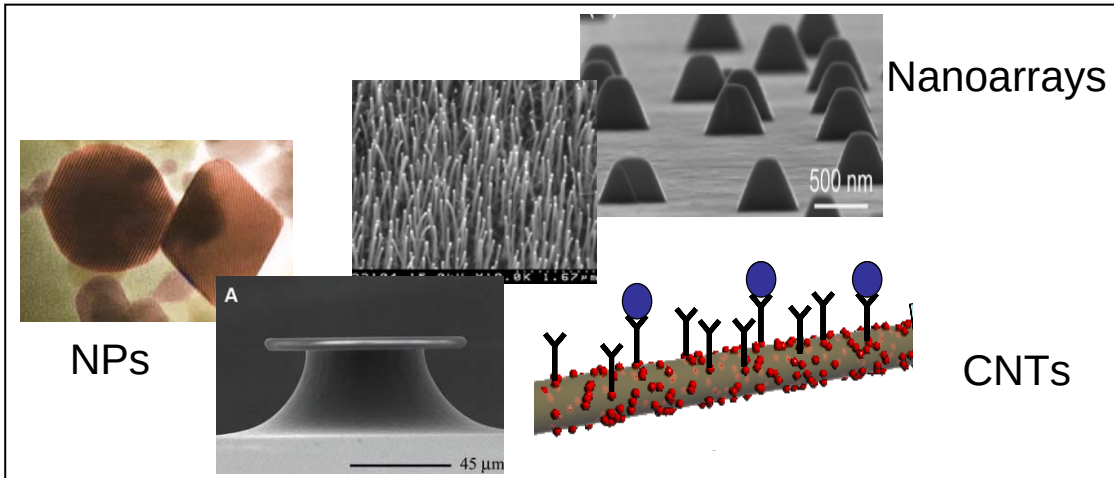
The key is the bioengineering of the sensor interface



Nanobiostructures

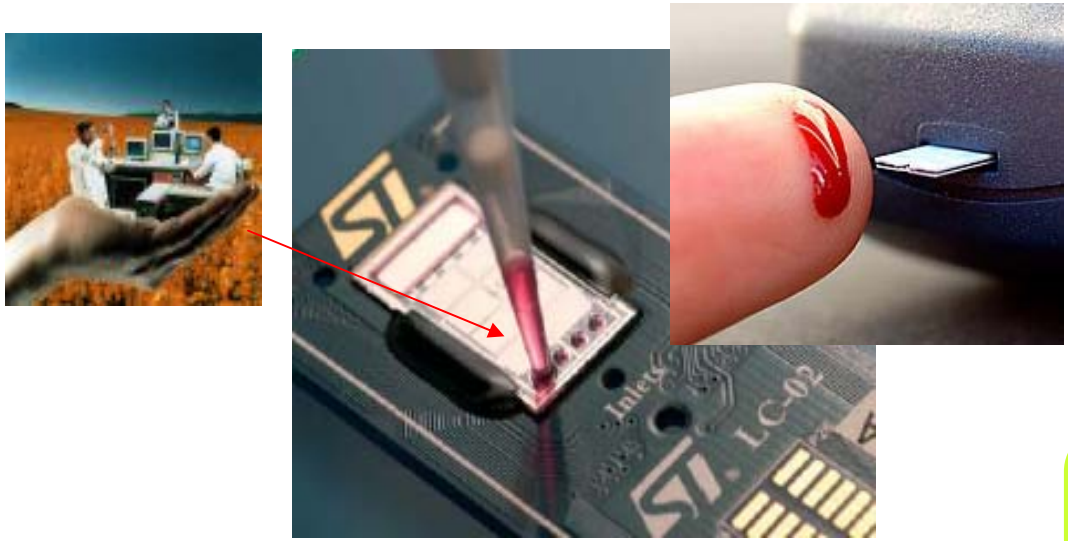


Oriented, stable, optimal surface densidad superficial óptima, no adsorciones inespecíficas



CIN2 CENTRE D'INVESTIGACIÓ EN NANOCIÈNCIA I NANOTECNOLOGIA
CAMPUS UAB, BELLATERRA, BARCELONA

“Lab-on-a-chip” nanobiosensor microsystem



- Nanobiosensores
- Microfluidica
- Electrónica y procesado datos
- fuentes y detectores

“POCT” point-of care testing

- precision
- sensitivity
- selectivity
- label-free
- fast
- stability
- no pre-treatment

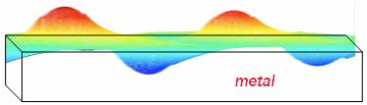
- Instant Diagnostic
- In any place at any time
- Can operate inside the human body

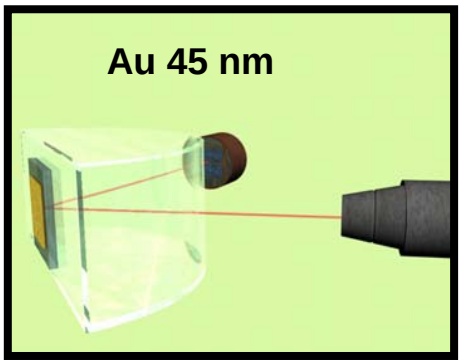
Some applications	Aim
Drug development	Targeted and rapid design of new active ingredients
Cancer research	Identification of cancer genes and individual
Microbiology	Classification of microorganisms
Food industry	Analysis of various disease pathogens in food

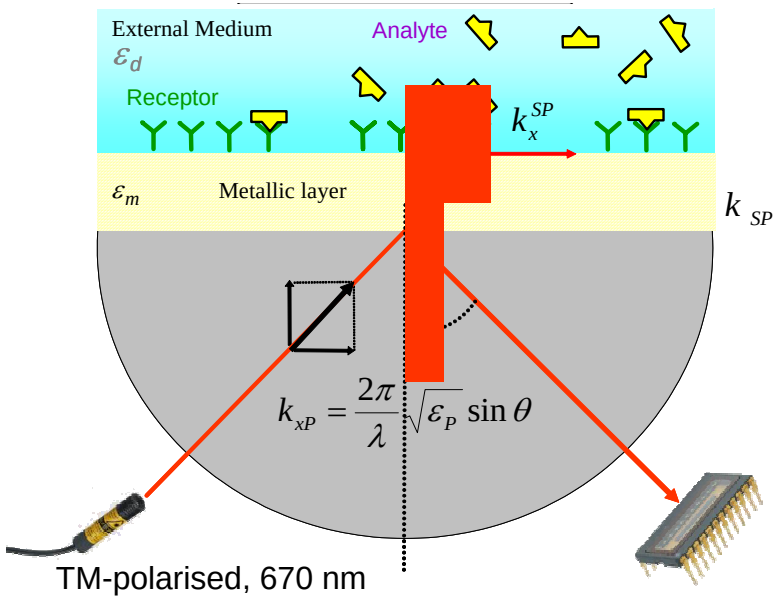
PLASMONIC NANOBIOSENSORS

Surface Plasmon Resonance Biosensor (SPR)

SPR working principle



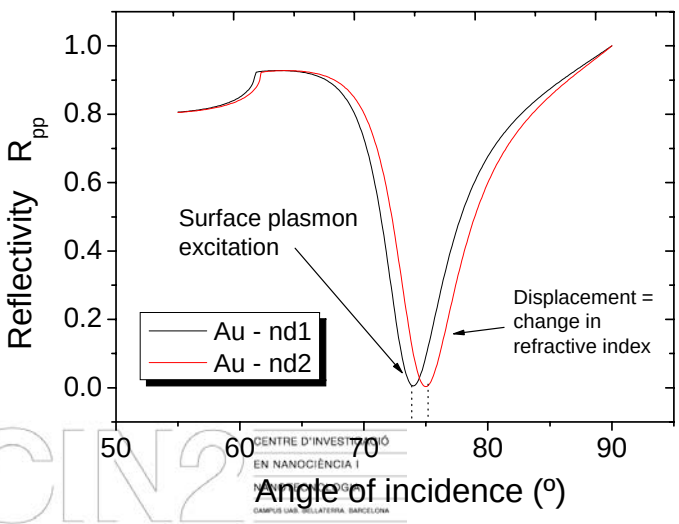


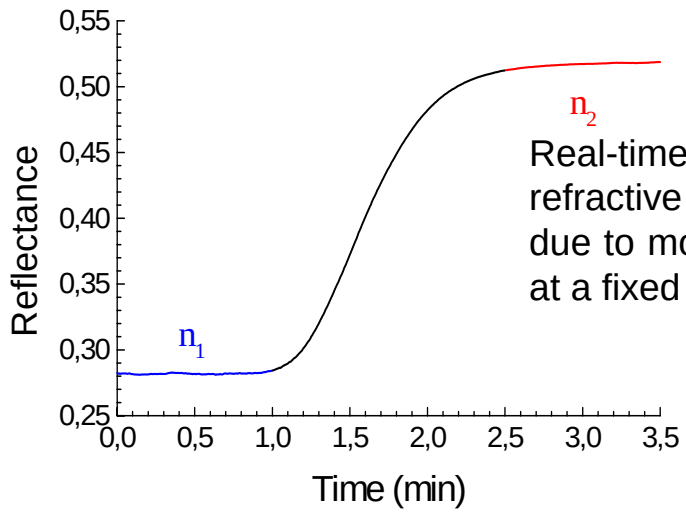


$$k_{SP} = k_0 \sqrt{\frac{\varepsilon_m \varepsilon_d}{\varepsilon_d + \varepsilon_m}}$$

TM-polarised, 670 nm

Determination of refractive index changes as a variation of the Resonance angle

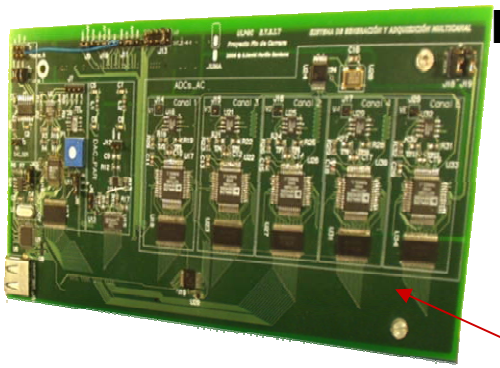




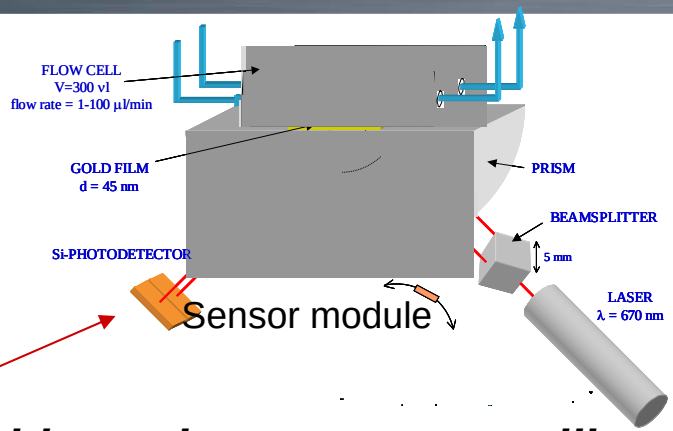
$\Delta n_{min} \sim 10^{-5}$

Real-time detection of refractive index variations due to molecular interactions at a fixed angle

Plasmonic Biosensor (SPR)



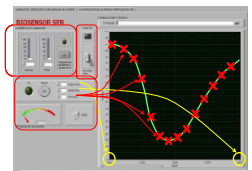
Portable device, two channels

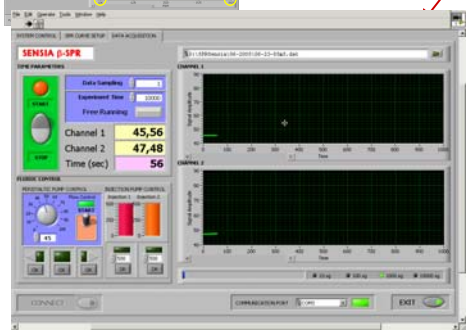


Sensor module

electronics

(old version, new one will be release at the end´08)

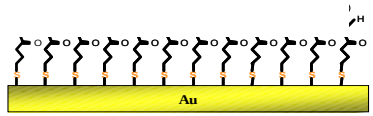




Software

Wireless transmission module

Flow delivery System



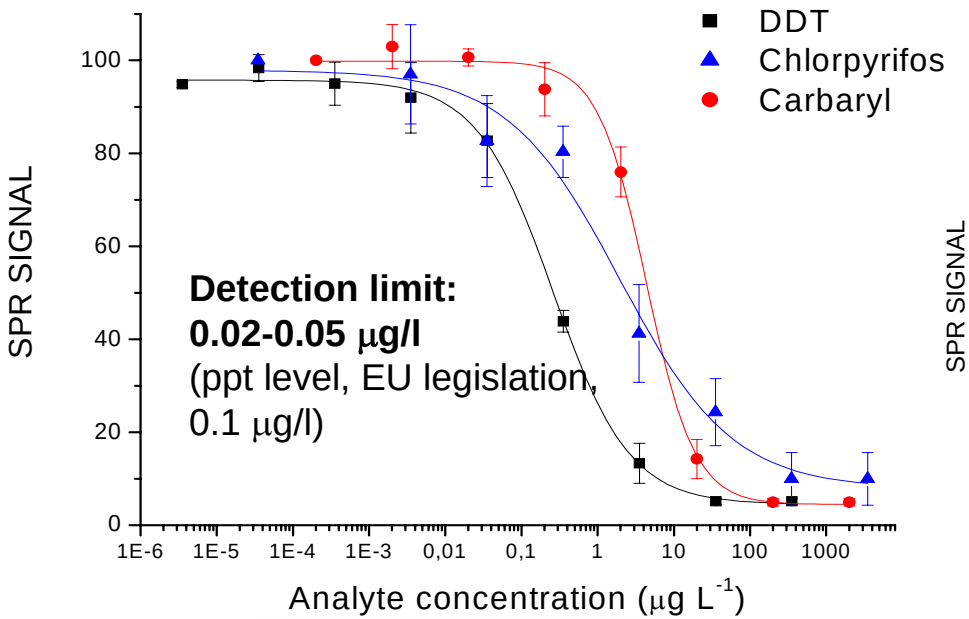
Immobilization and regeneration

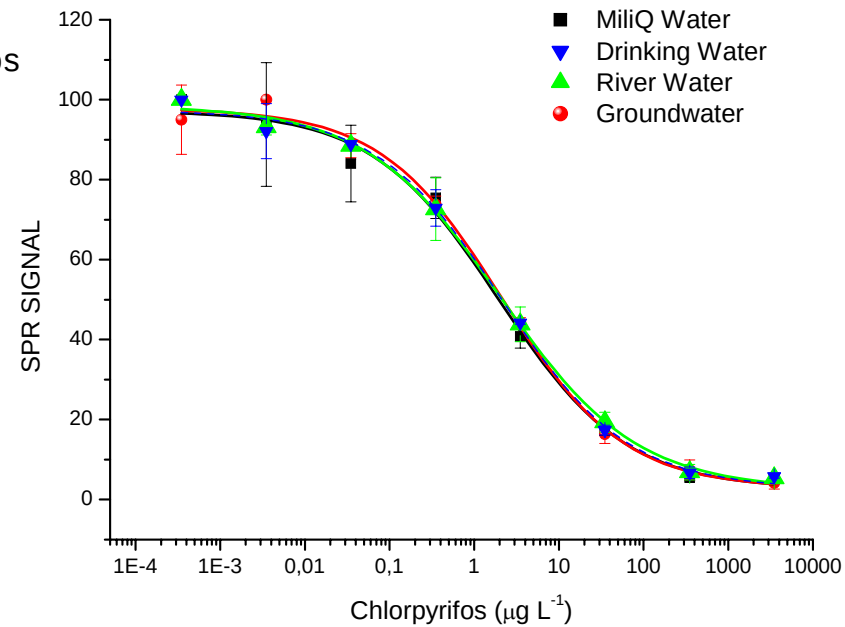
CENTRE D'INVESTIGACIÓ EN NANOCIÈNCIA I NANOTECNOLOGIA
CAMPUS UAB. BELLATERRA. BARCELONA

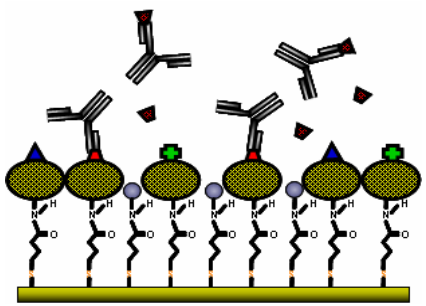
SPR Biosensor: applications

Environmental toxic pollutants in real samples (water safety)

INHIBITION IMMUNOASSAY







- **Direct detection in real water samples**
- **Monoclonal antibodies**
- **No pre-treatment, fast**
- **Cycle of analysis 20 min**
- **More than 200 regenerable**
- **Validated results**
- **up to 6 analytes same analysis!!**

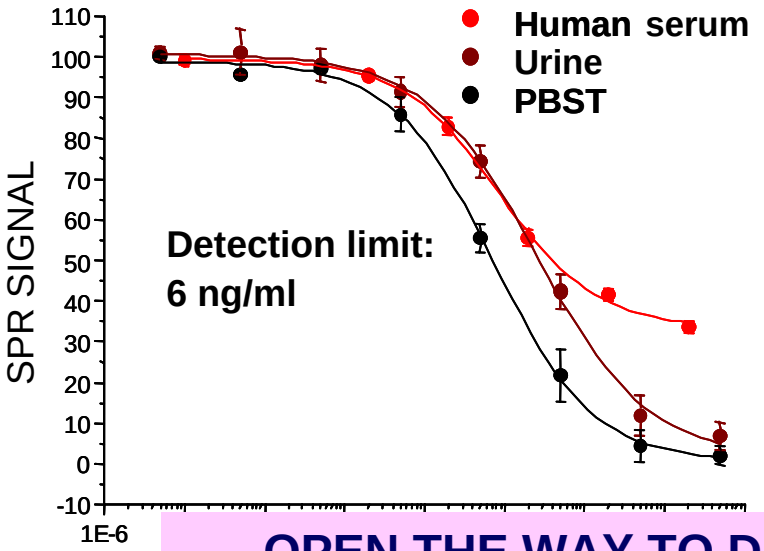
Anal. Chim. Acta 561, 40 (2006)
Biosens.& Bioelec.21, 2129 (2006)

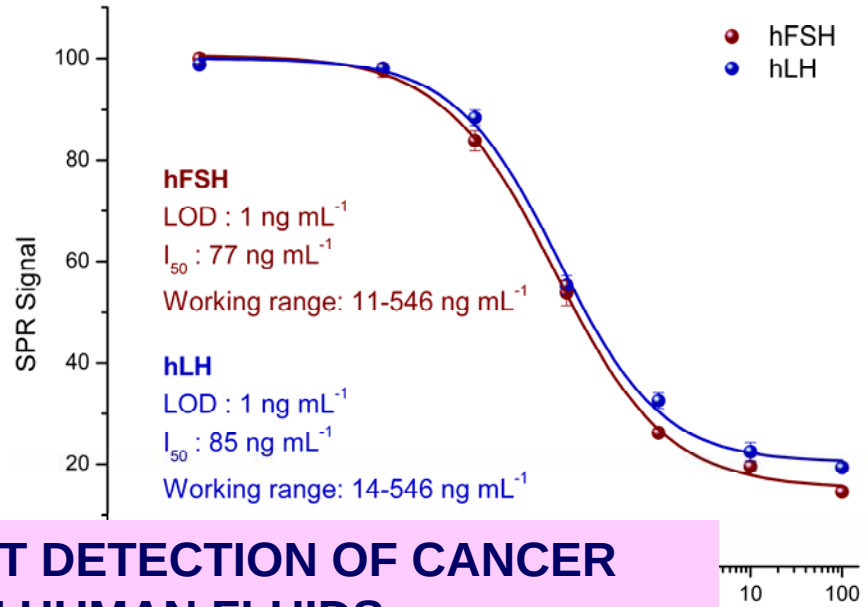
SPR Biosensor:

Clinical diagnosis in human samples (urine, serum)

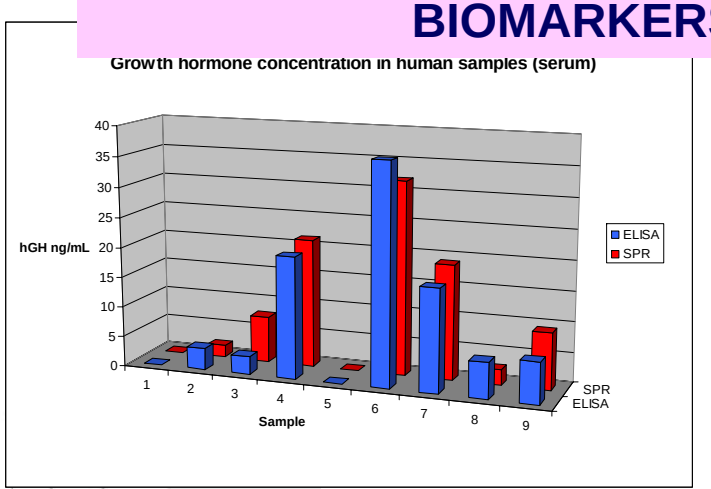
Human Growth hormone



Luteinizing hormone (hLH), Folicle stimulating hormone (FSH)



OPEN THE WAY TO DIRECT DETECTION OF CANCER BIOMARKERS IN HUMAN FLUIDS

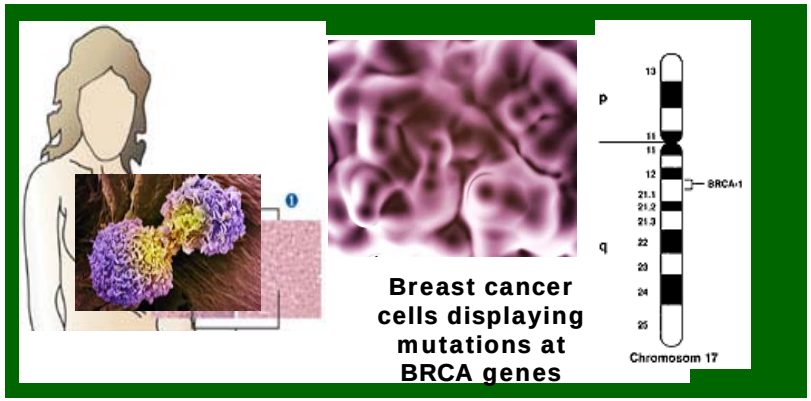


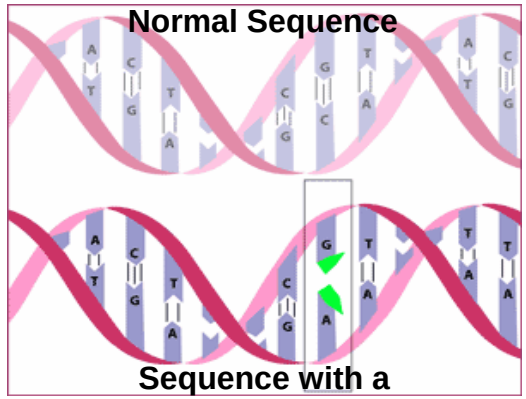
- Direct detection in real human samples
- No pre-treatment
- Detection at physiological levels
- More than 100 regenerable
- Validated results
- Fast
- Low sample volume

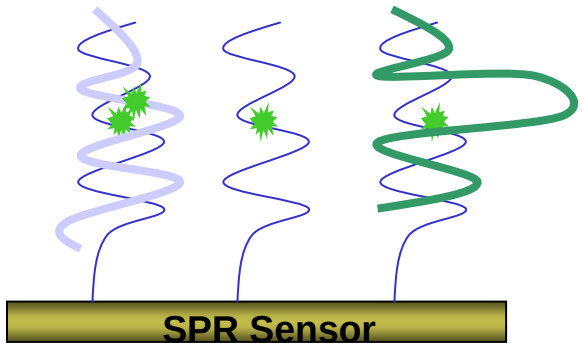
SPR Biosensor: Early cancer diagnostics

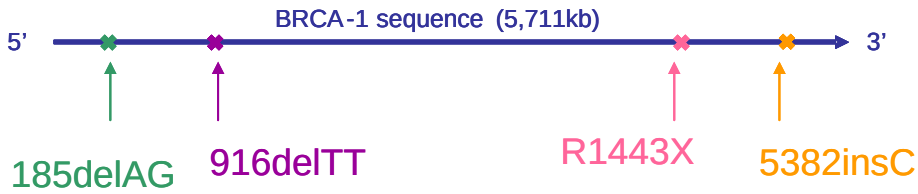
EARLY DETECTION OF INHERITED BREAST CANCER

Detection of point mutations at BRCA-1

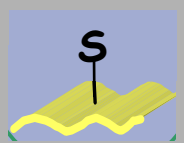








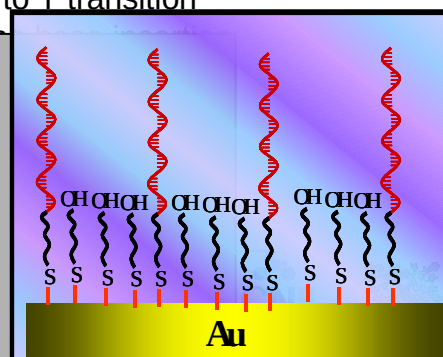
185delAG = two bases (AG) deletion
916delTT = two bases (TT) deletion
R1443X = C to T transition



Covalent attachment of thiol-derivatized DNA probes

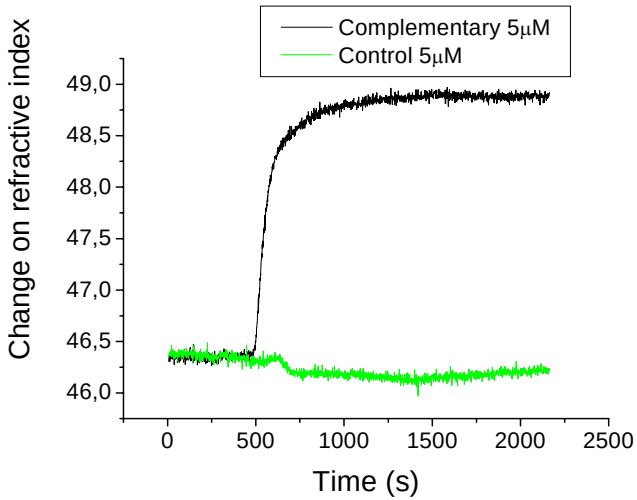
DNA self-assembled monolayers

(Optimisation of buffer concentration, stringency conditions, aditives, lateral and vertical spacers, T^a,)

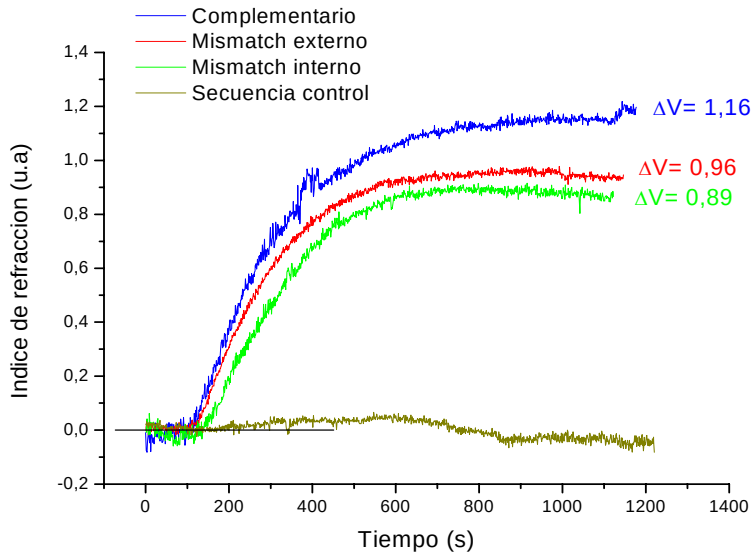


SPR Biosensor: Early cancer diagnostics

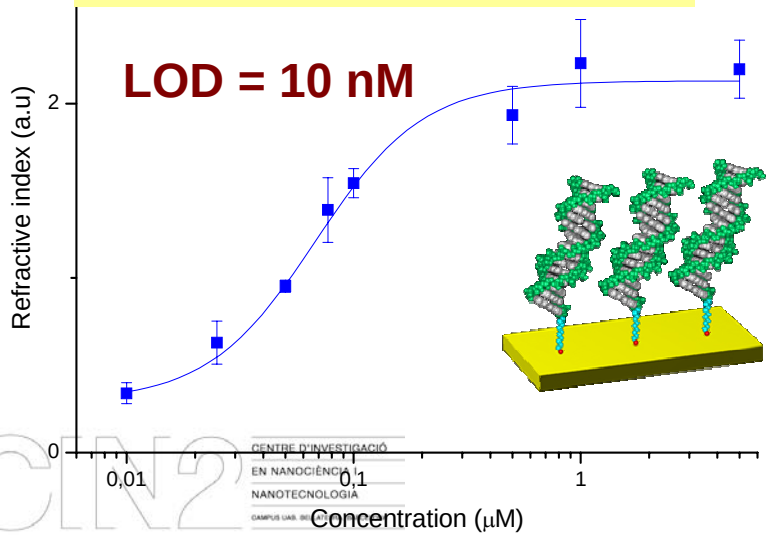
Hybridisation detection



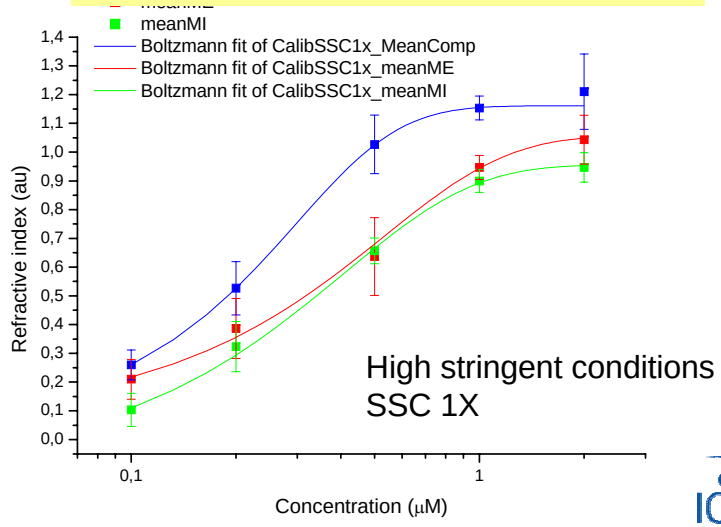
Detection of mutations



Non stringent conditions



High stringent conditions



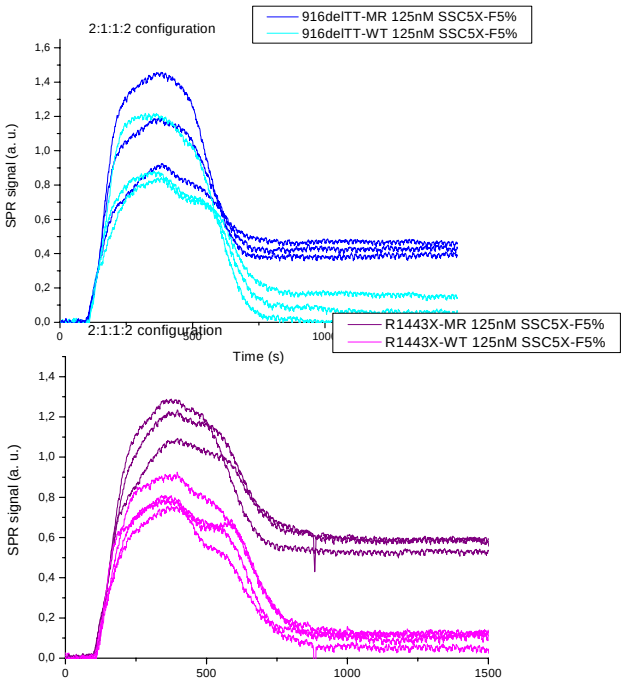
CIN2 CENTRE D'INVESTIGACIÓ EN NANOCIÈNCIA I NANOTECNOLOGIA

ICN Institut Català de Nanotecnologia CSIC

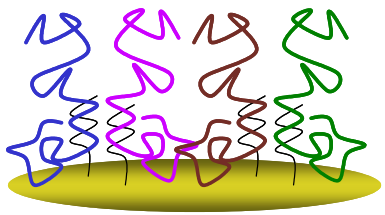
Hybridization with PCR oligos-like: Tetra-analyte detection format

185delAG = two bases (AG) deletion
916delTT = two bases (TT) deletion

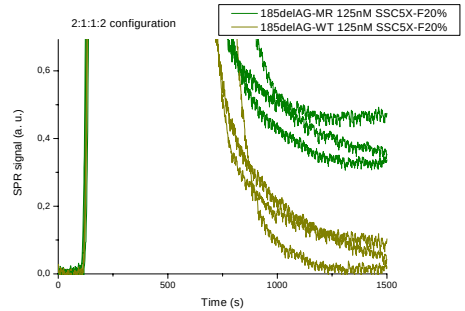
R1443X = C to T transition
5382insC = one base (C) insertion

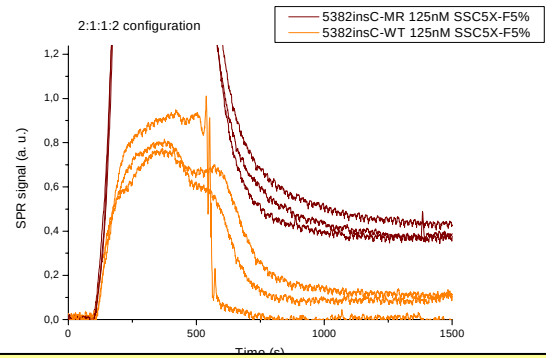


Gene BRCA-1



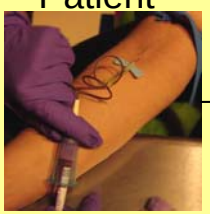
Sensor chip





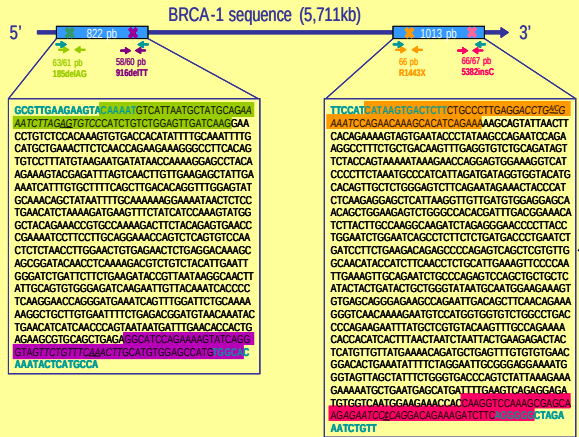
Time scale: less than 1 hour

Patient



DNA Extraction

PCR



To the sensor for analysis

BUT with SPR biosensors.....

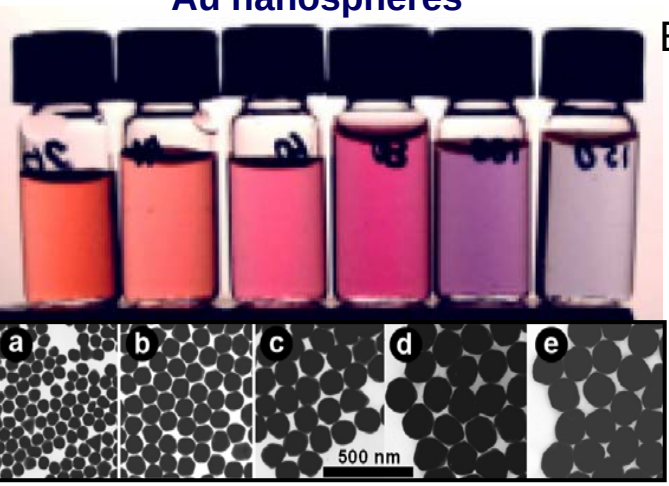
- No sensitivity for small analytes and very low concentrations (pM-femtoM, single-molecule detection)
- Although portable device, size and weight are not optimal
- Multianalyte capabilities for high throughput

Higher sensitivity is required
Microsystems platforms
High throughput/multiplexing capabilities

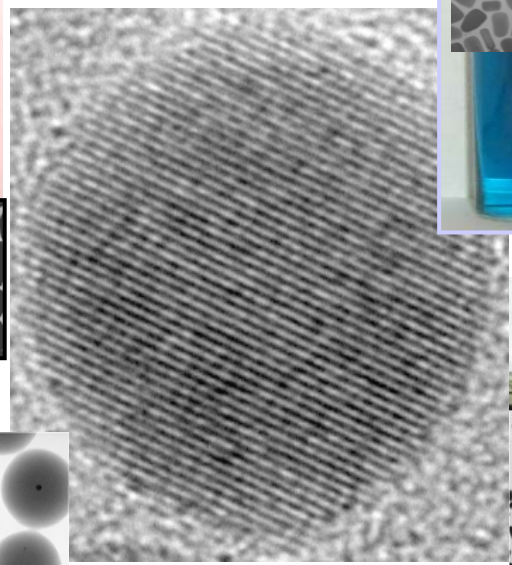
1) **Integrated photonic Mach-Zehnder nanointerferometers**
2) **Nanomechanical biosensors (standard and optical microcantilevers)**
3) **Localised Surface Plasmon Resonance in nanoparticles (LSPR) and magnetoplasmonic biosensors**

Localised plasmon in Nanoparticles

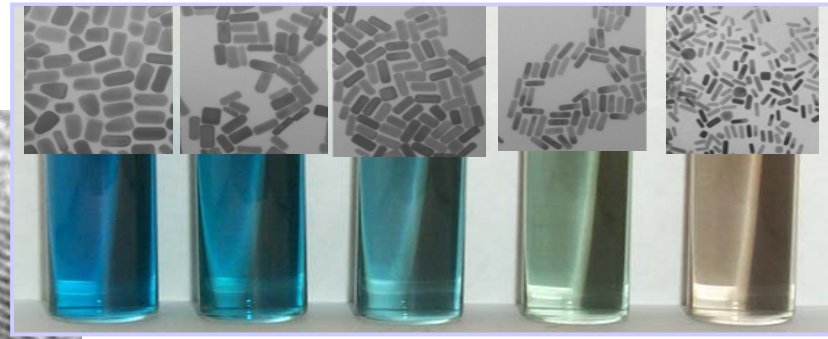
Au nanospheres



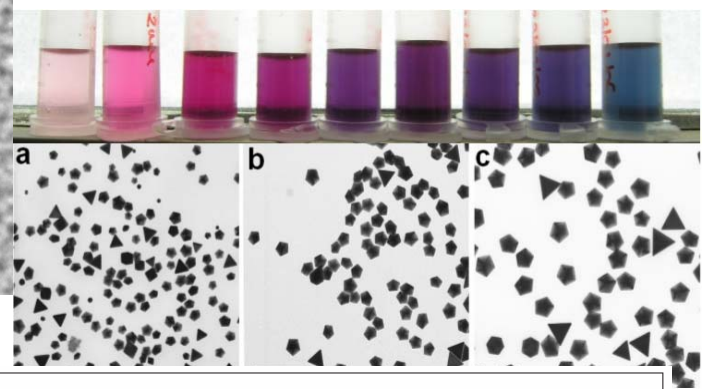
EM strongly localized



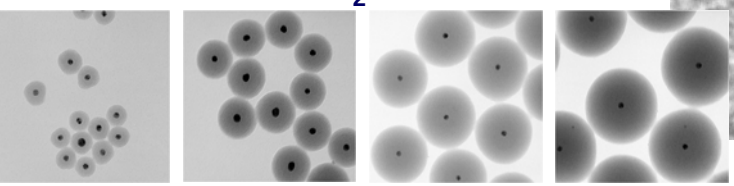
Au nanorods

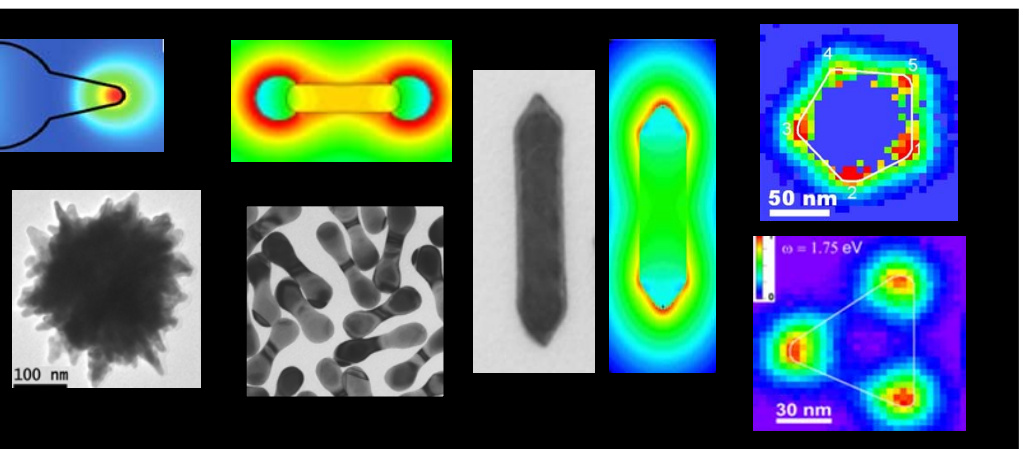


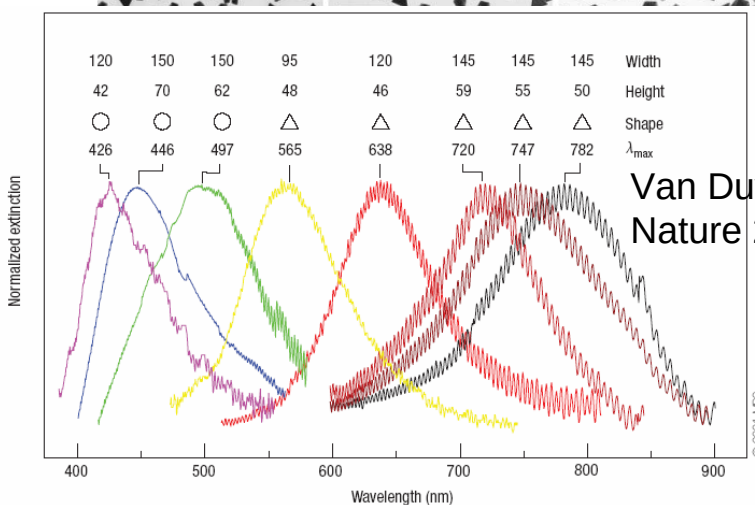
Au decahedra



Au/SiO_2





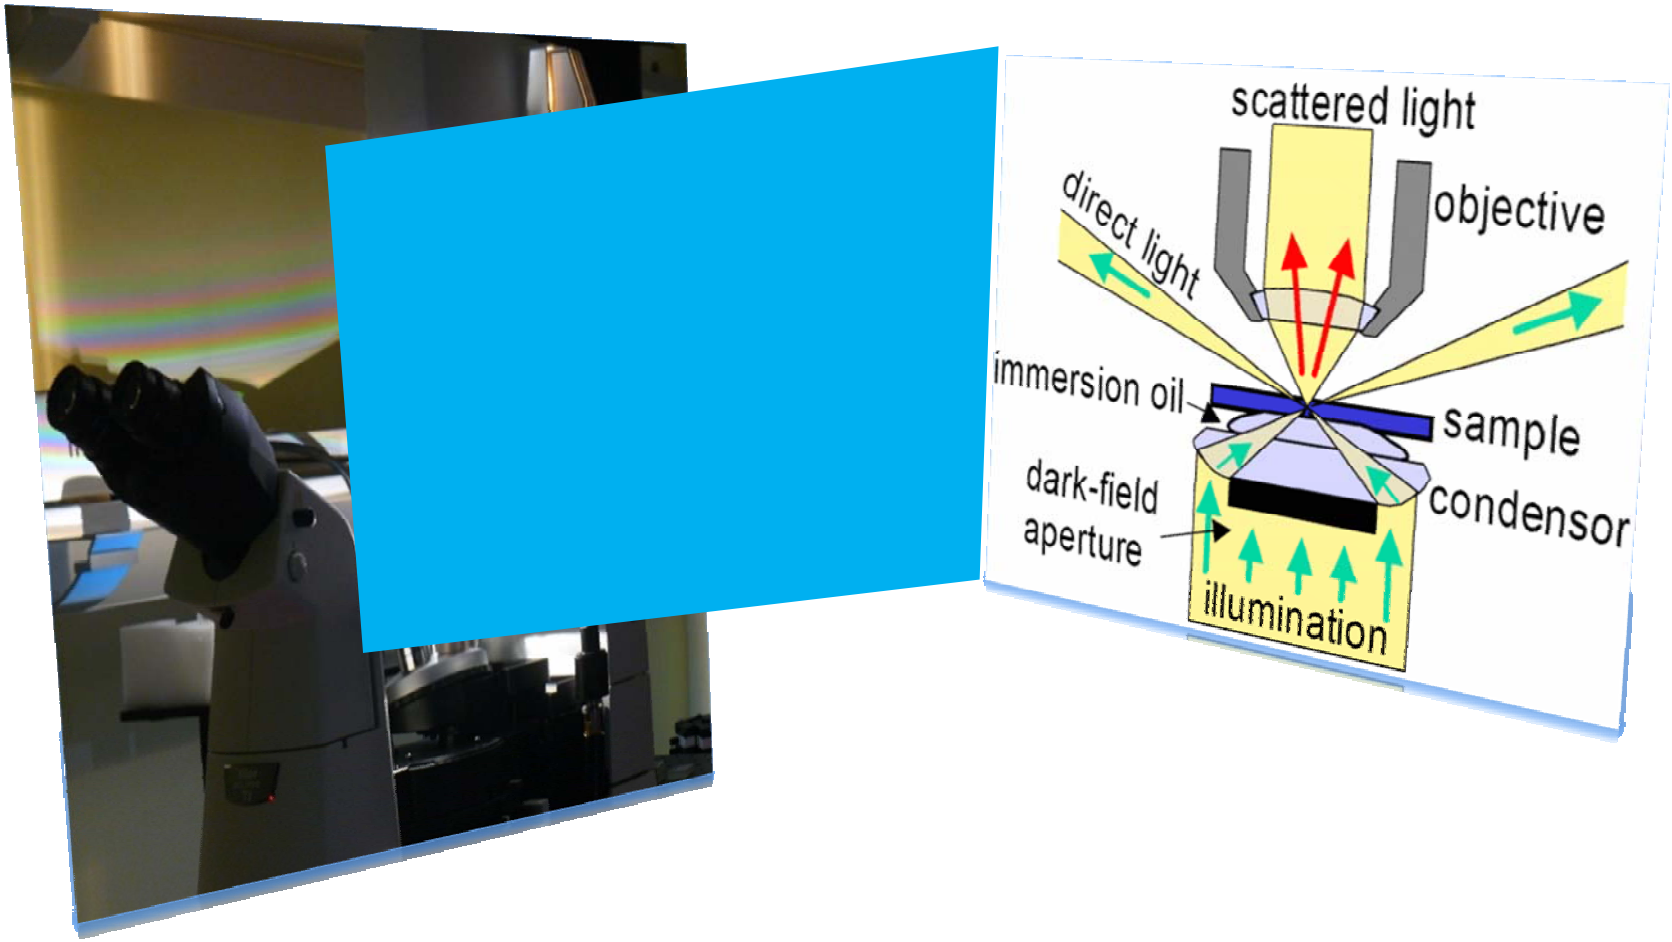


Van Duyne, Nature 2008

Prof. Luis Liz- Marzán, Univ. Vigo

CSIC

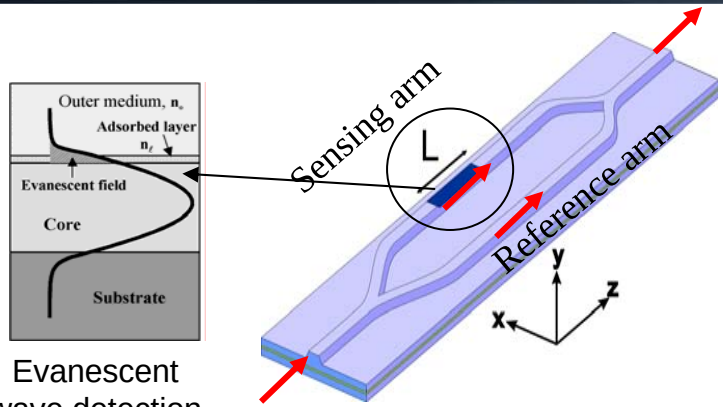
LSPR: Dark-field Microscopy



OPEN THE POSSIBILITY OF HIGHLY DENSE NANOBIOSENSING ARRAYS FOR THOUSANDS OF ANALYTES

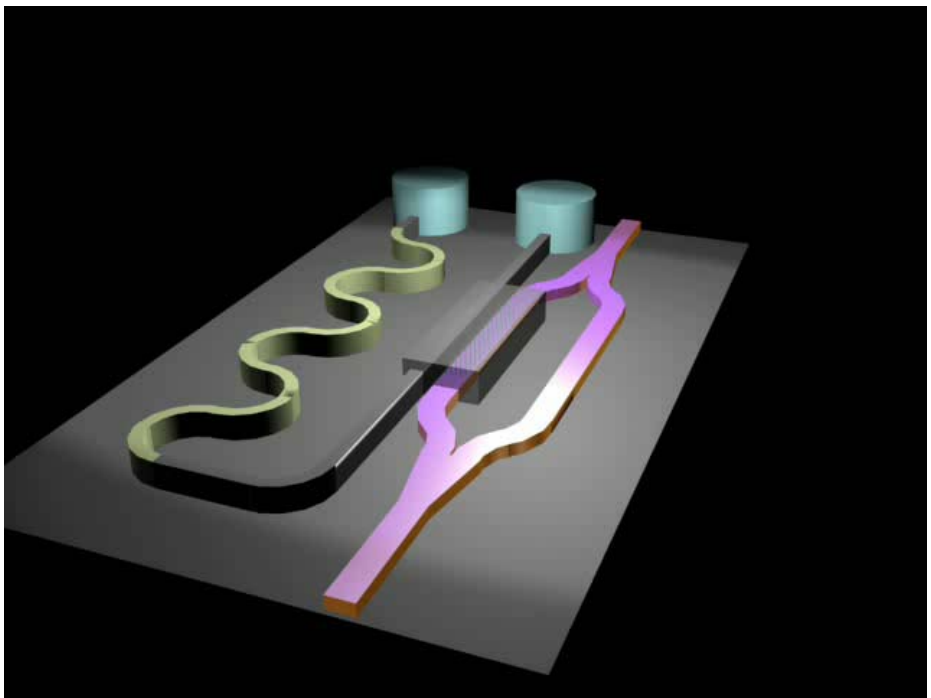
PHOTONIC NANOBIOSENSORS

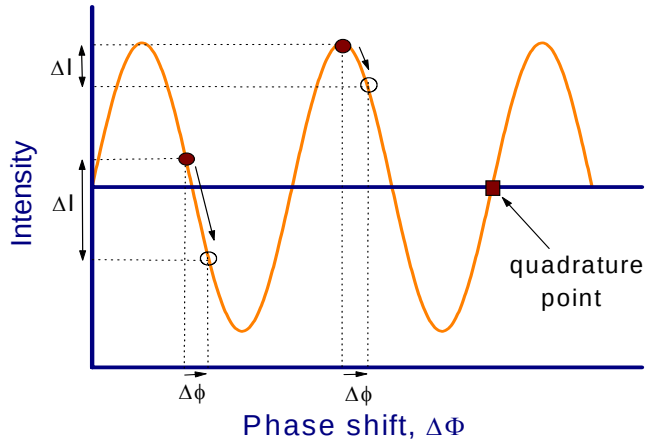
Photonic Nanosensor: Mach-Zehnder Interferometer



Evanescent wave detection

Y-junctions: 50% splitting and recombining





$$I = I_o \cdot \delta^2 \cdot \left[1 + V \cdot \cos(\Delta\Phi)\right]$$

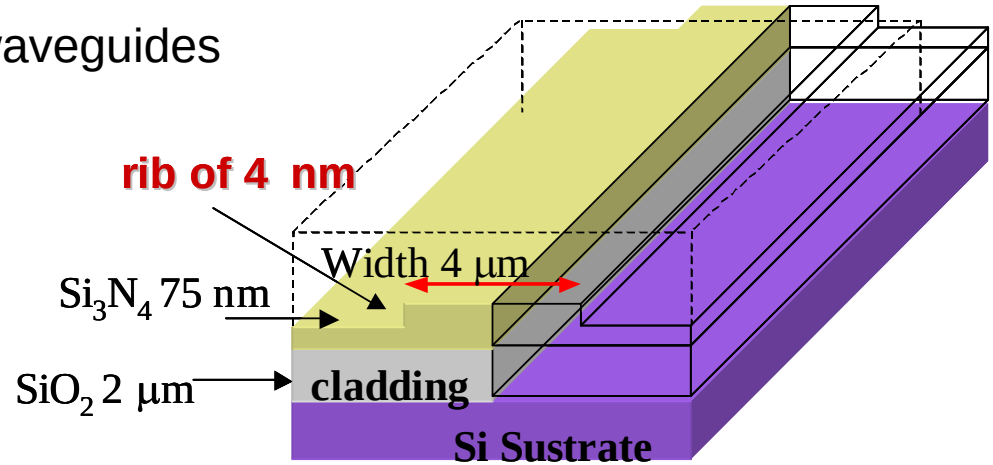
$$\Delta\Phi = \frac{2\pi}{\lambda} \cdot \Delta N \cdot L$$

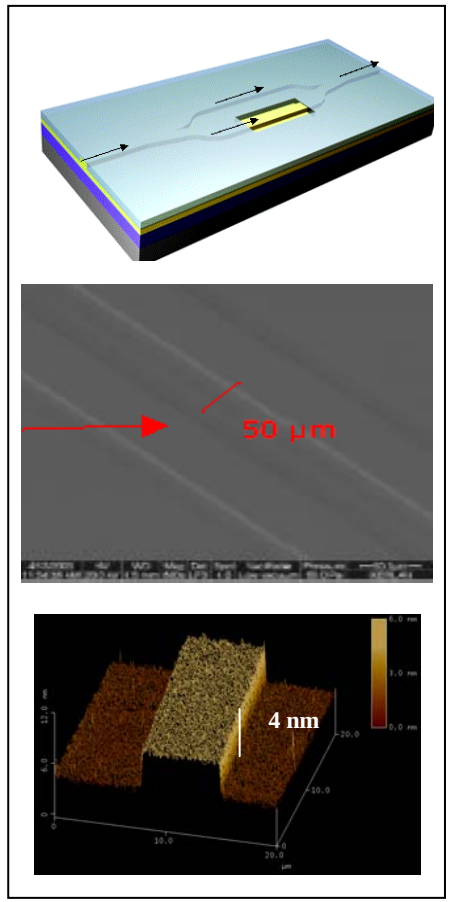
Design of the system

- *Single mode behaviour*
- *High surface sensitivity*

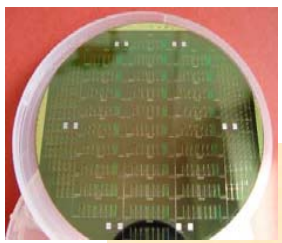
Photonic chip

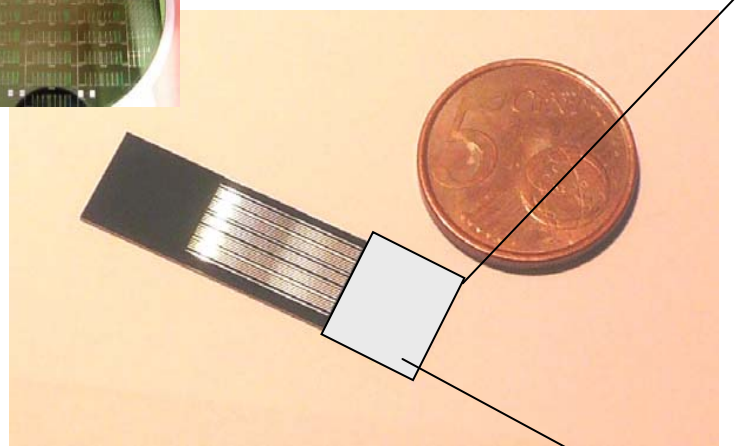
Optical waveguides

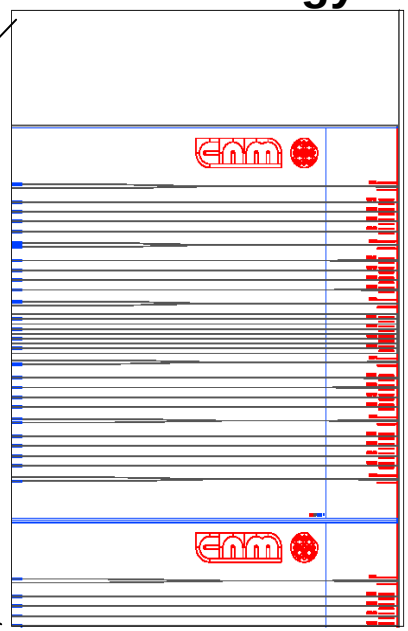




Standard fabrication at Clean Room facilities.
Robust and reproducible technology.

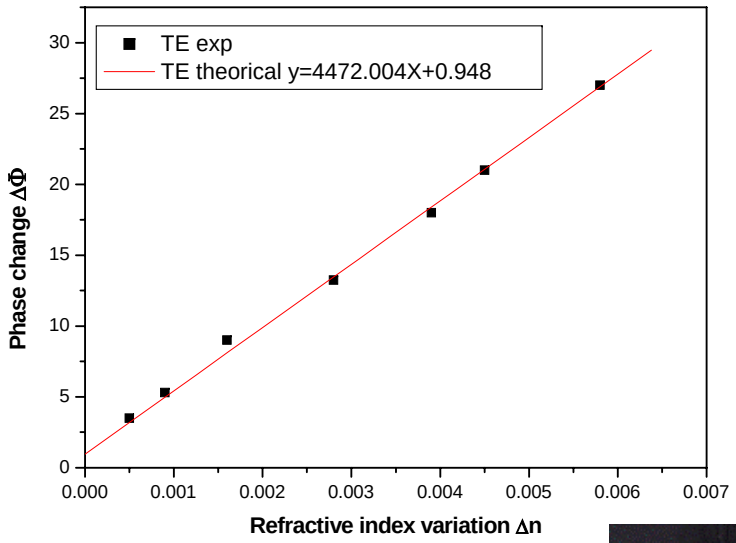






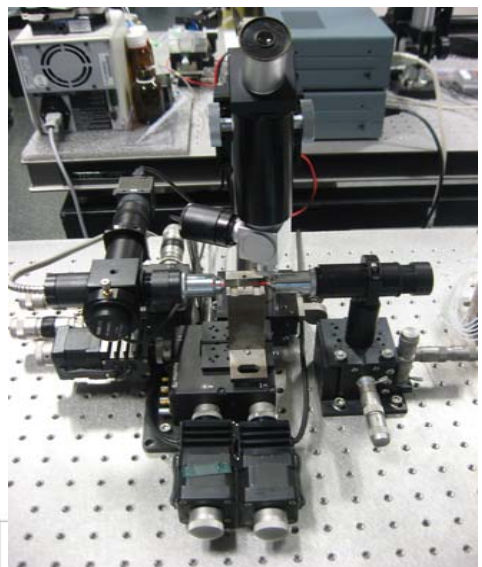
MZI Performance

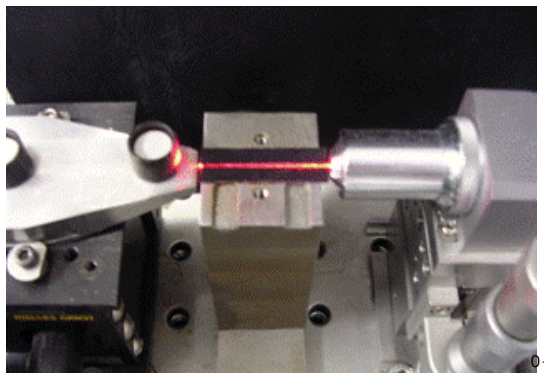
Sensitivity evaluation

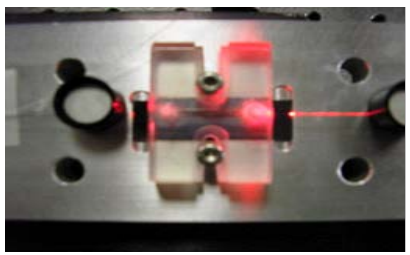


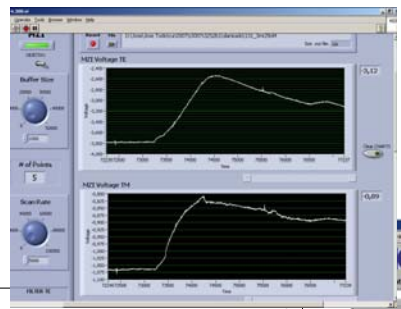
$\Delta n_{o,min} = 1.1 \times 10^{-7}$ $\Delta N_{eff,\ min} = 2.0 \times 10^{-8}$

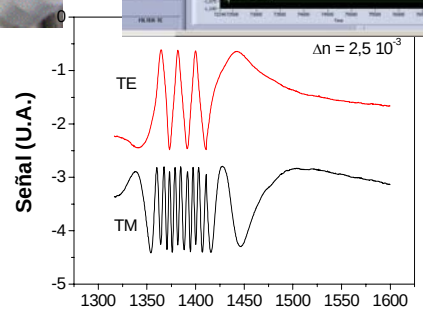
The detection limit value corresponds to an average growth layer of 1.10^{-4} nm (3.10^5 mol.cm^2) and a Surface Sensitivity around 2.10^{-4} nm^{-1}. Direct detection in the picomolar range (10^{-12} M) is possible (60 fg/ mm^2)

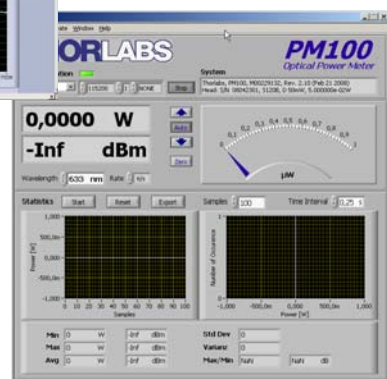










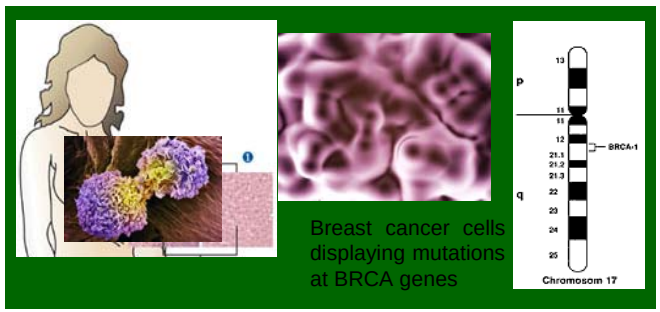


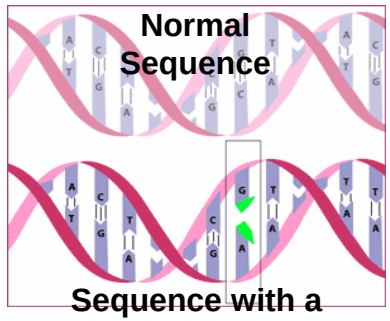
NANOTECNOLOGIA
CAMPUS UAB. BELLATERRA. BARCELONA

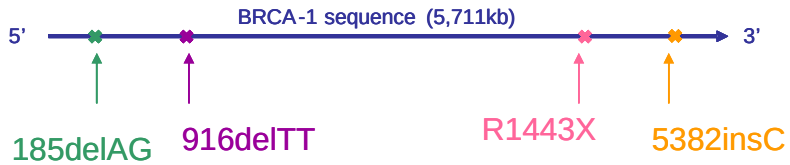
MZI Sensor: Clinical diagnosis

EARLY DETECTION OF INHERITED BREAST CANCER

Detection of point mutations at BRCA-1







185delAG = two bases (AG) deletion
916delTT = two bases (TT) deletion
R1443X = C to T transition
5382insC = one base insertion

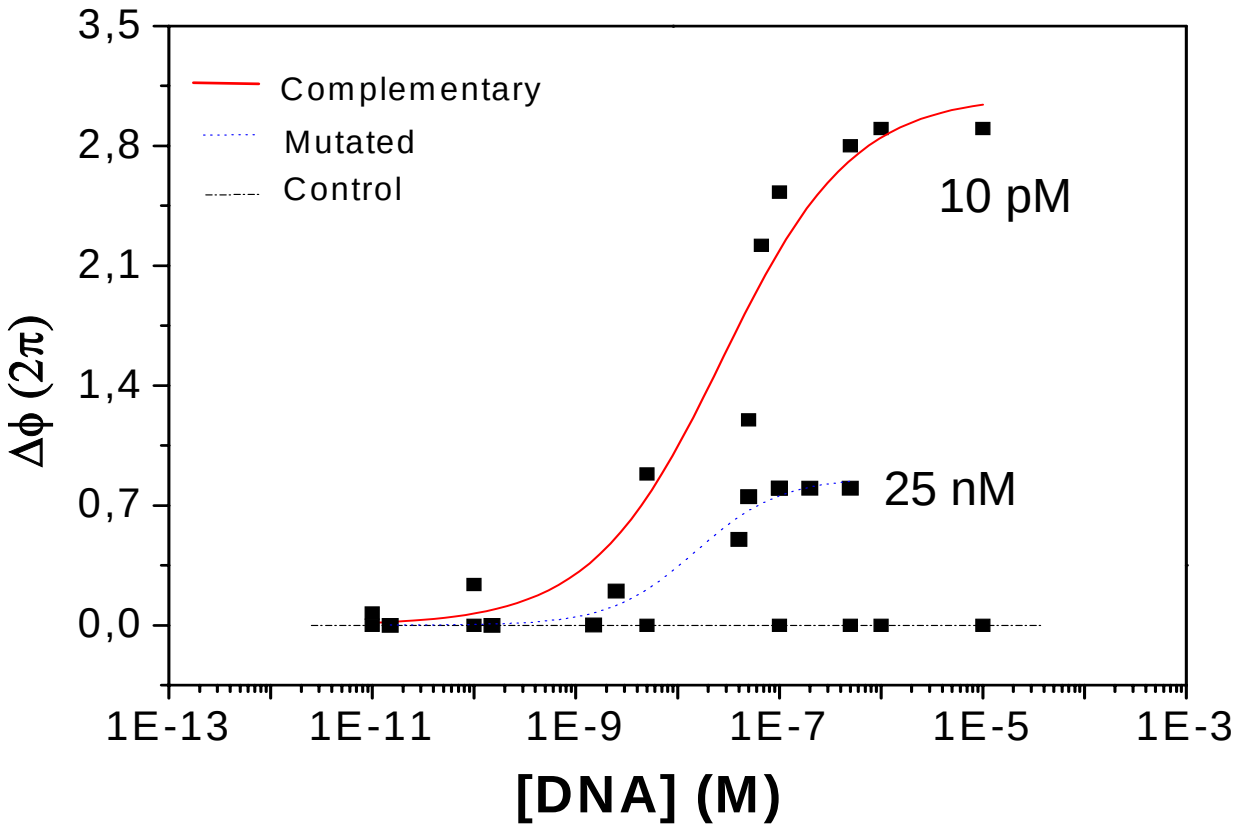
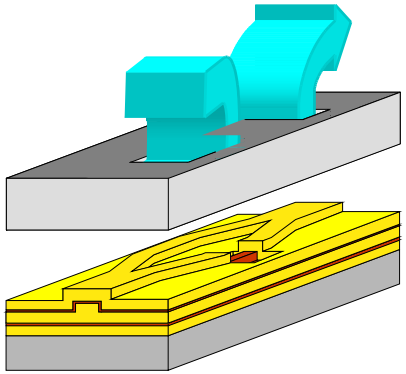
Nanophotonic chip: Results

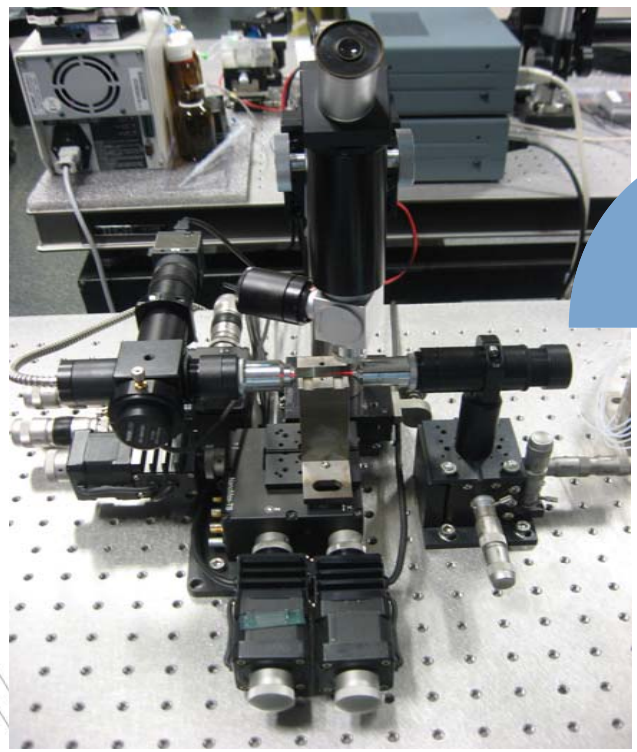


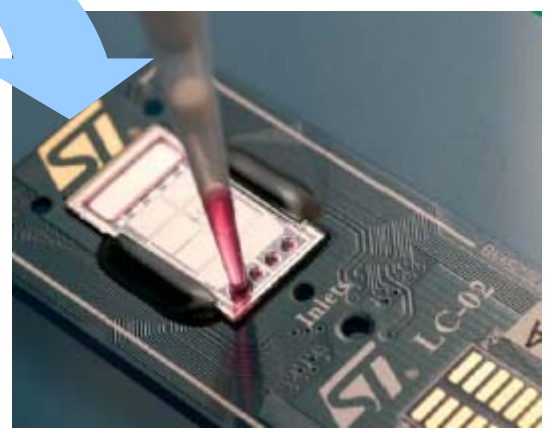
From *chip on a lab* to "*lab on a chip*"



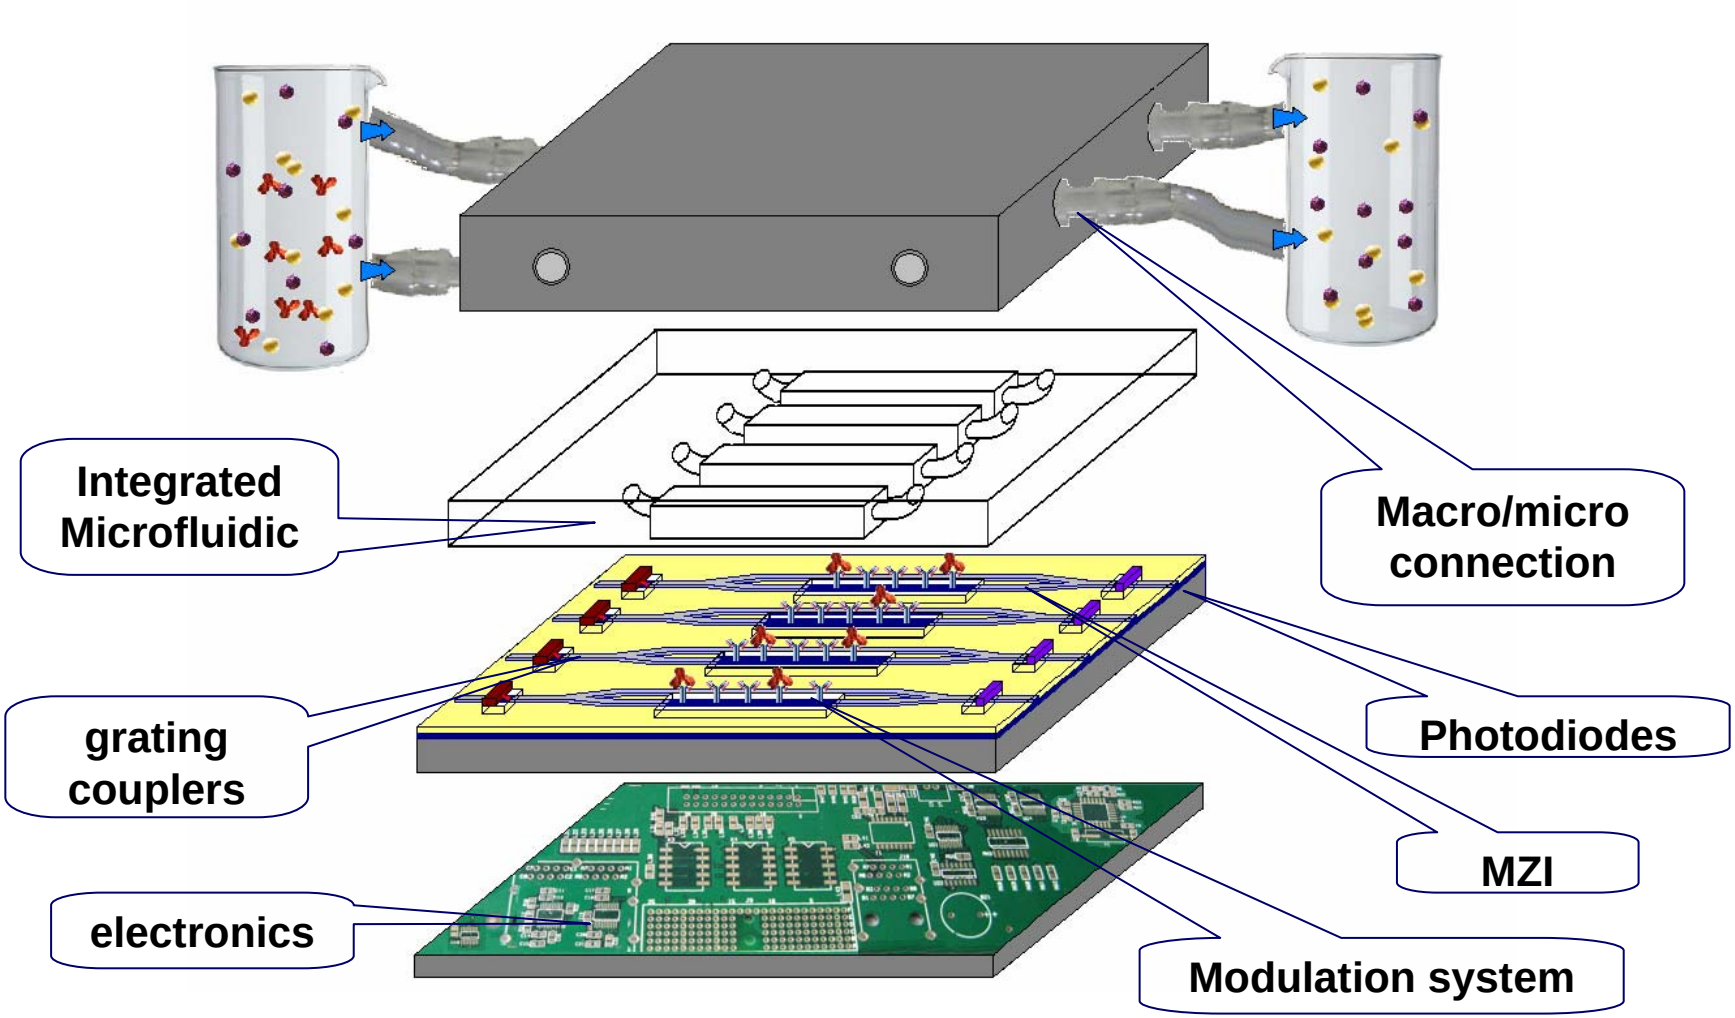
Results using a macro-flow cell: only one sensor, high volume of reagents and samples.

Integration of micro/nanobiosensors in platforms with microfluidics, biological reagents, excitation and signal acquisition and processing.



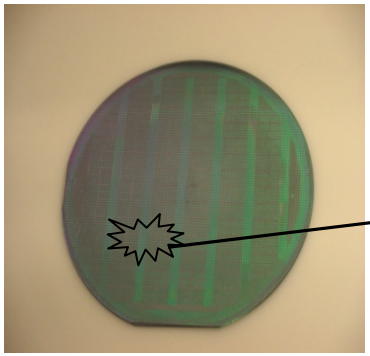


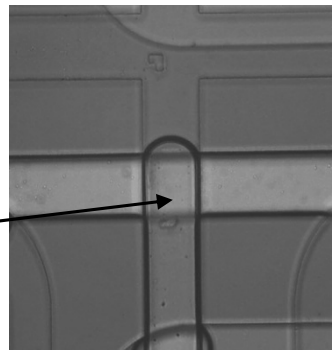
“Lab-on-a-chip” Biosensor microsystem: Our approach

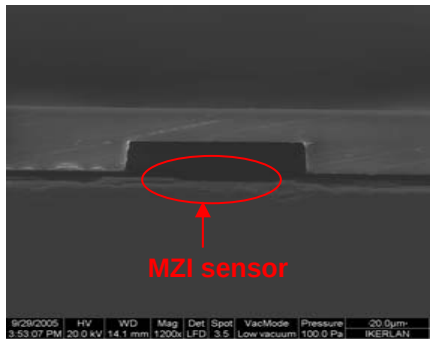


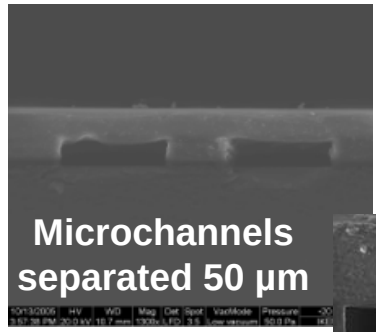
Fully integration of optical functions within microfluidic chips is in its infancy **on-chip approach**

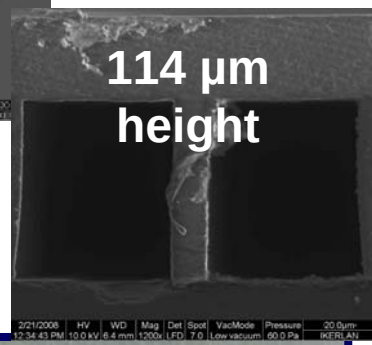
Nanosensor/microfluidics integration



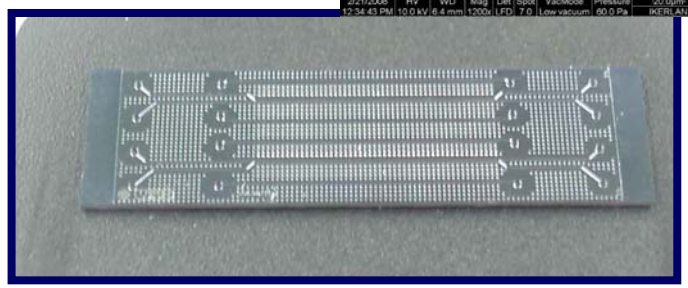


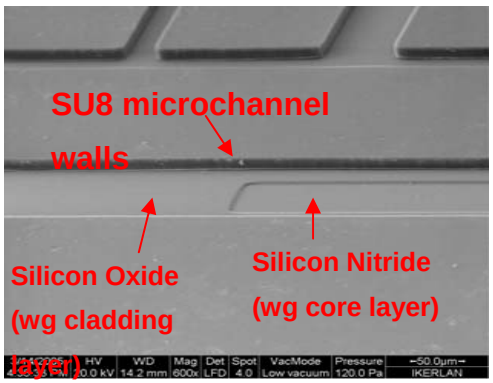


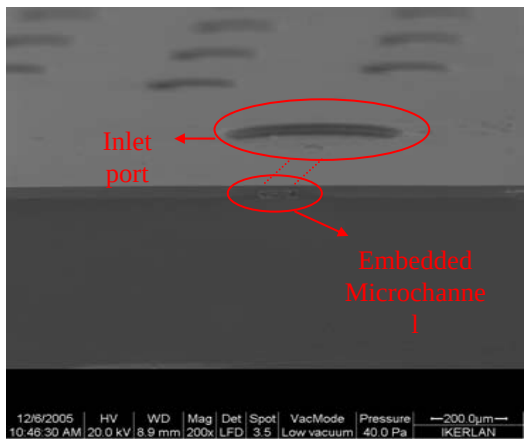


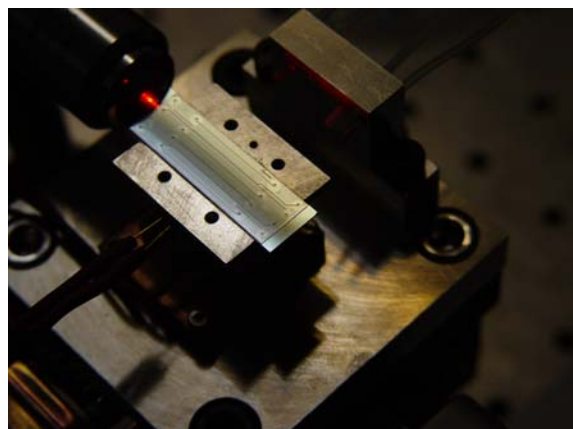


Channels of 20-115 µm height and 50-150 µm width









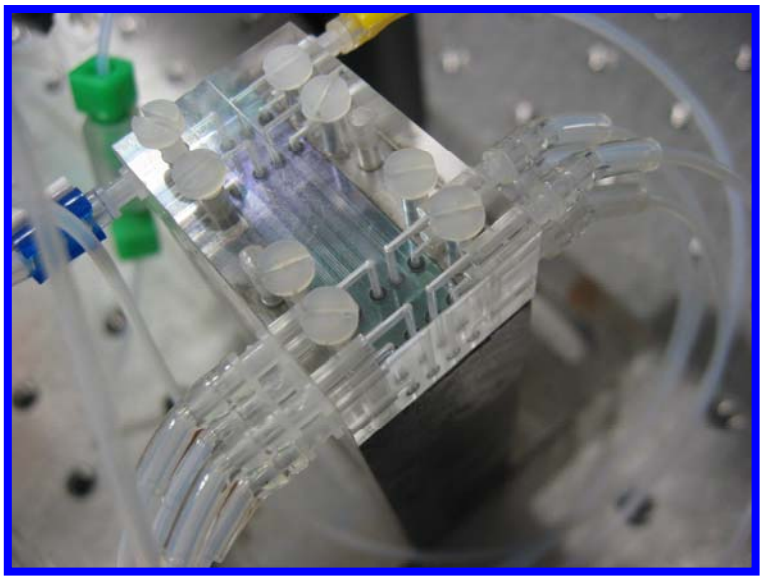
3D-microfluidic network

Microfluidic inlet and the embedded microchannel on top the MZI devices

SPIE Photonics West, 2007, 647
J. of Micromechanics and Microengineering, 16, 1006, 2006

Nanosensor/microfluidics integration

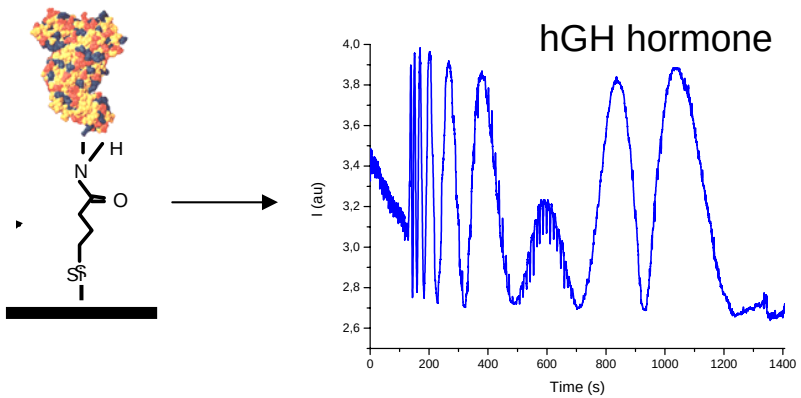
Connection macro/micro



- Modular technology using microfabricated PMMA housing external module
- Easy replacement of the external connections and packaging

•Steady-state flow rates: 1-1000 µL/min

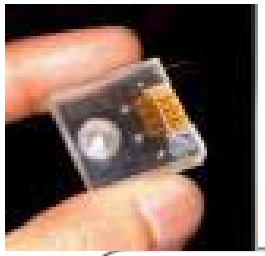
•Up to 10 Bar without any liquid leakage

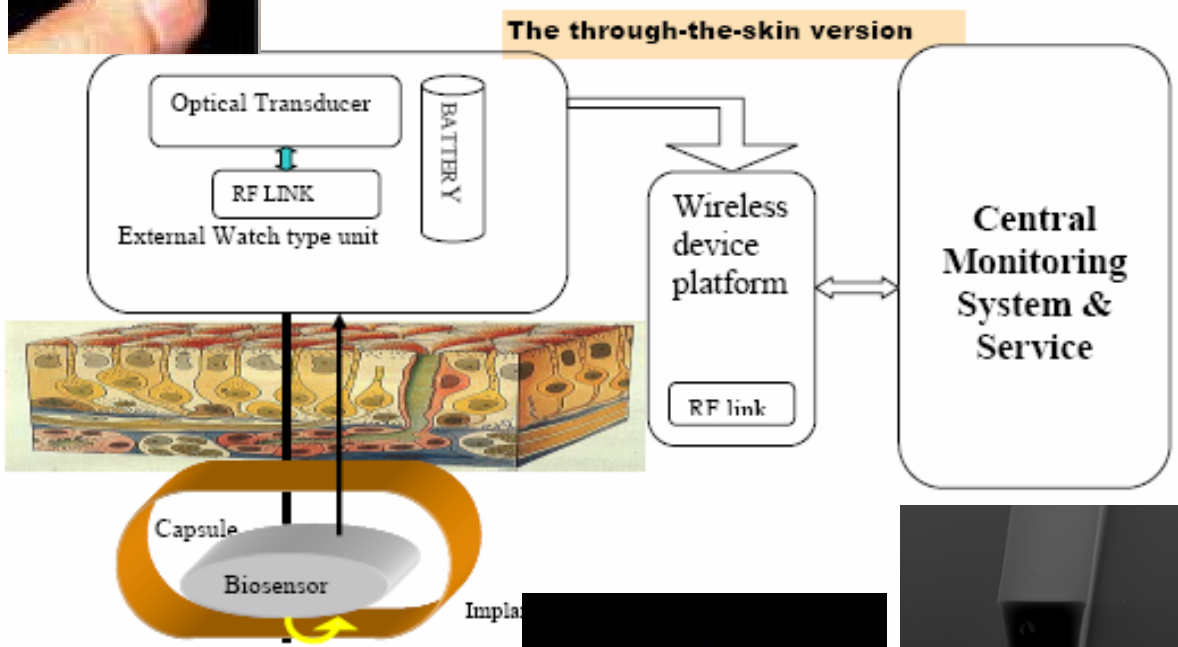


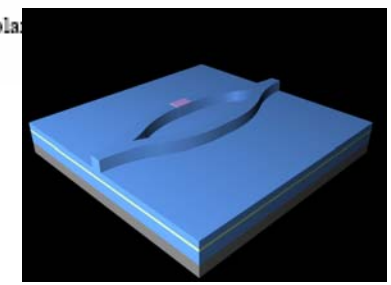
- Reduction of 100 times the chemical reagents consumption!!!
- SU-8 microfluidics is resistant to acid and organic solvents (cleaning and regeneration)

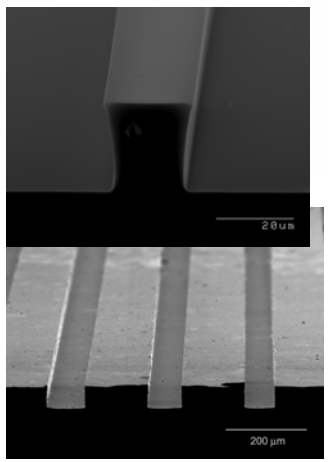
www.p-cezanne.com

Development of an implantable biosensor for continuous care and monitoring of diabetic patients (P. CEZANNE)









The biosensor will be implanted in the human body during 6 months-1 year, working in a continuous way and with a wireless transmitting data capabilities.

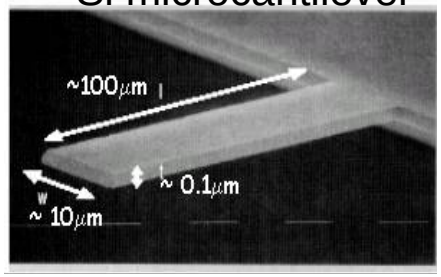
NANOMECHANICAL BIOSENSORS

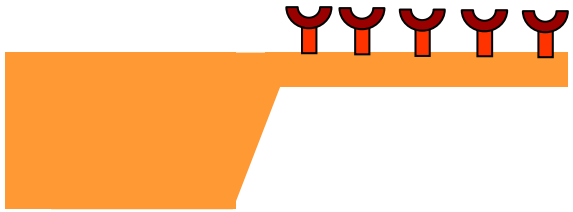
What is a microcantilever sensor?

Si microcantilever

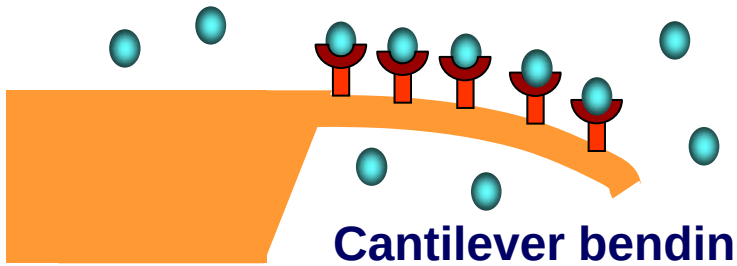


A new class of highly sensitive, label-free and direct biosensor which transduces the molecular recognition of biomolecules into a nanomechanical motion
(SNPs-DNA and femtomolar-proteins)

1) Microcantilever functionalization



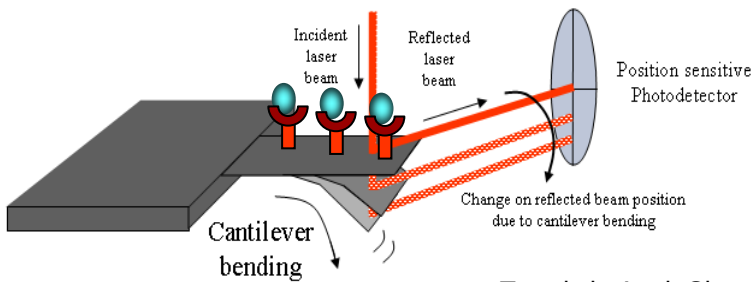
2) Biomolecular Recognition produces a bending of the cantilever due to change of surface stress

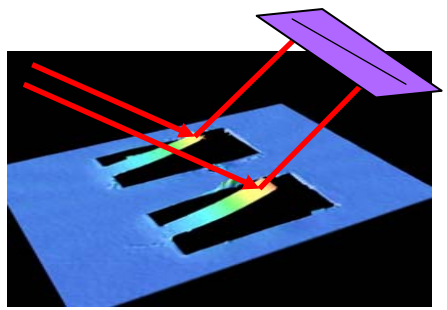


Cantilever bending ~ nm

OPTICAL READ-OUT: High sensitivity

$$z \approx 4\frac{1-\nu}{Et^2}L^2(\Delta\sigma_t - \Delta\sigma_b)$$

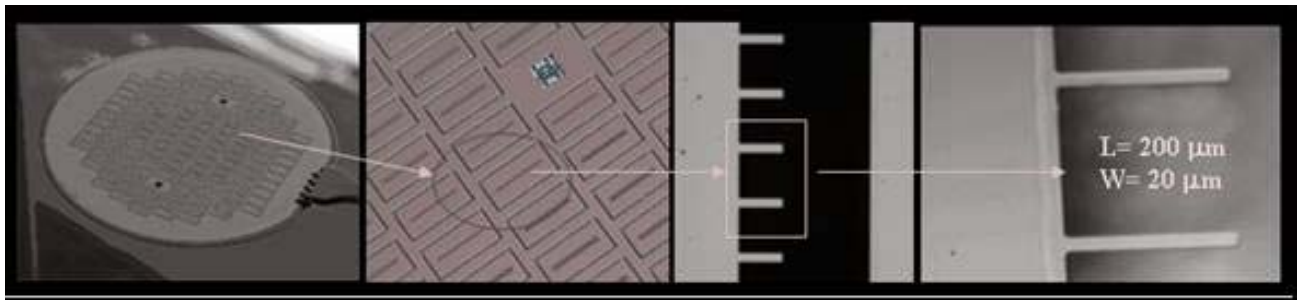




Array of cantilevers

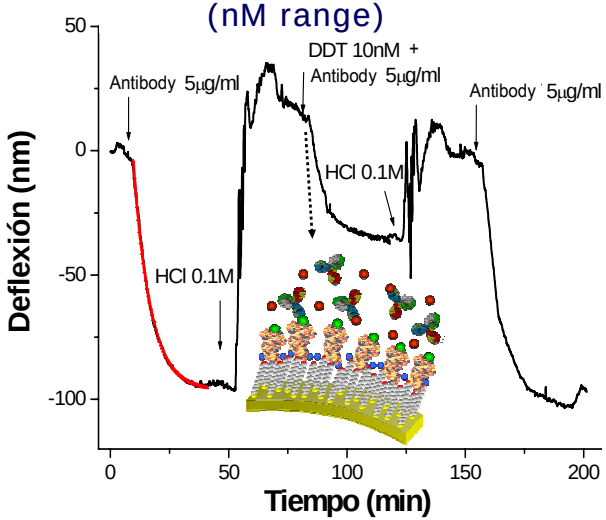
Trends in Anal. Chem (TRAC), 25(3), 196, 2006
Appl. Phys. Lett. 89 (2006) 094109
Cantilever Biosensors In "Optical Biosensors: Today and Tomorrow"
Editorial (si libro): Ed. F. Liegler and C. Taitt. Elsevier, Amsterdam (NL) 2008

Nanomechanical Biosensors

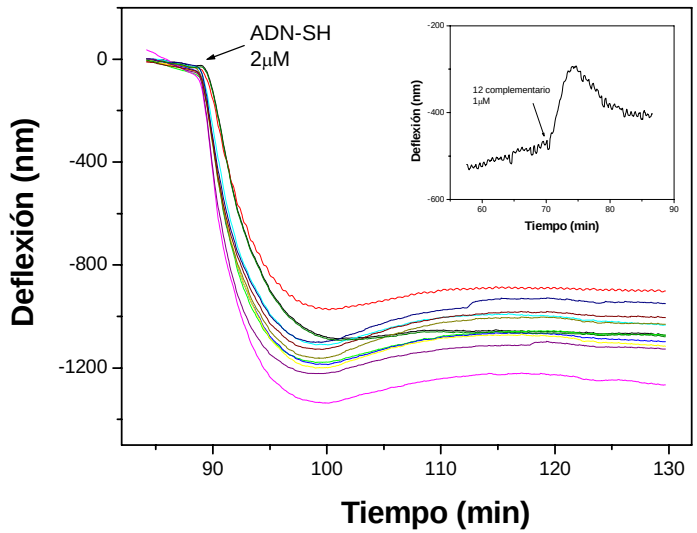


Si cantilevers, 2560 cantilevers, Array of 20-cantilevers, 0.334 mm thick, k= 5.5.10^{-3} N/m
Six time more sensitive for biosensing than commercial ones
minimum detectable deflection 0.1 nm
sensitivity expressed in *fm/Hz$^{-1/2}$* : 100

PROTEIN EVALUATION
(nM range)



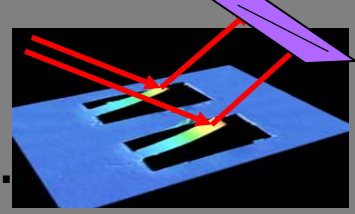
DNA EVALUATION

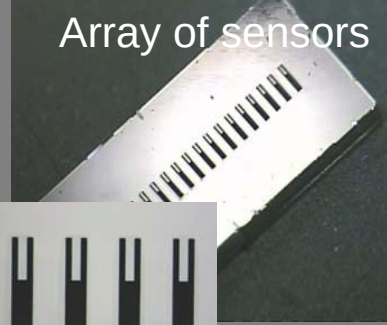


Langmuir, 20, 9663, 2004
Biosensors & Bioelectronics, 18, 649, 2003

Integration in Microsystems

For measuring arrays of microcantilevers.....





- **Advantages**
  - ✓ High sensitivity
  - ✓ Sub-angstrom resolution

- **Disadvantages**
  - ✓ Complex integration (difficult alignment): Difficult read-out of arrays
  - ✓ Sequential switching of the laser due to overlapping of the reflection beams
  - ✓ Complex detection by the PD chip
  - ✓ Microlens array onto laser chip
  - ✓ Immobilisation in each cantilever using the 20-flow cell

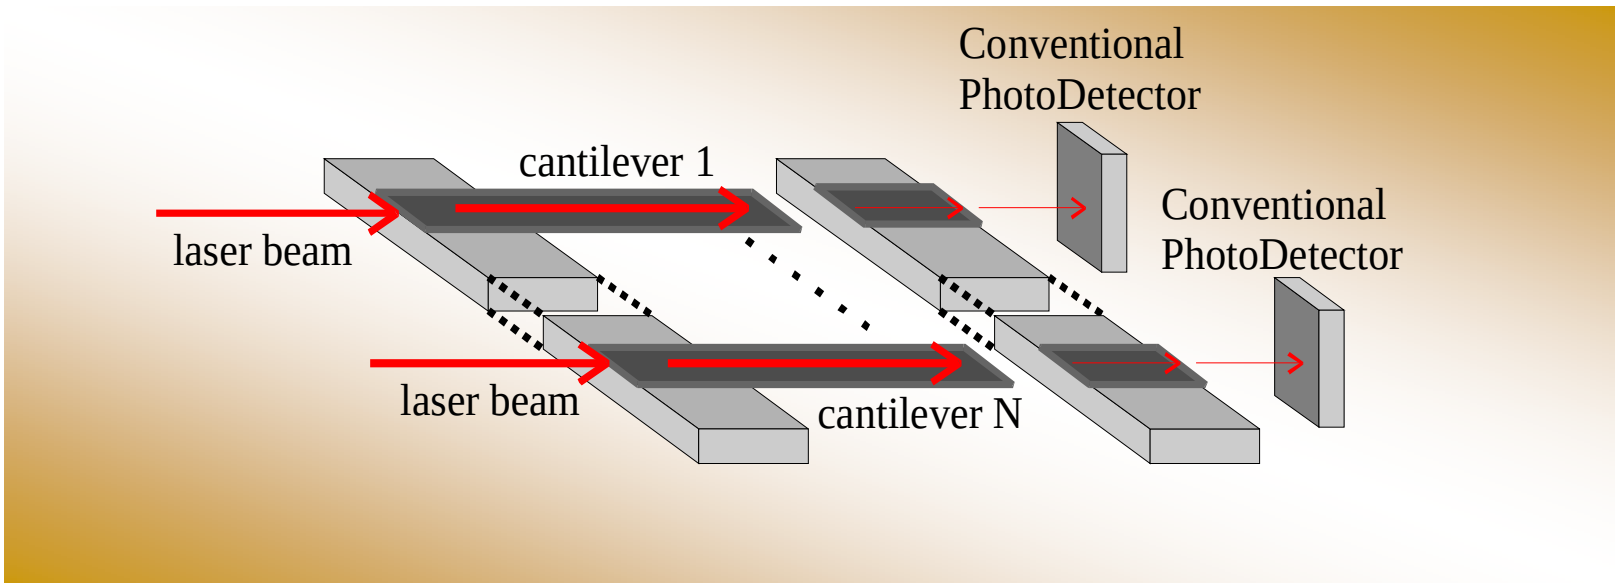
Flow cell-20-channels

- •Optics:20-VSCEL+Drivers
- •Photodetector array. CMOS circuitry
- •Microarrays of 20 microcantilevers
- •Microfluidics:flow cell with 20 channels

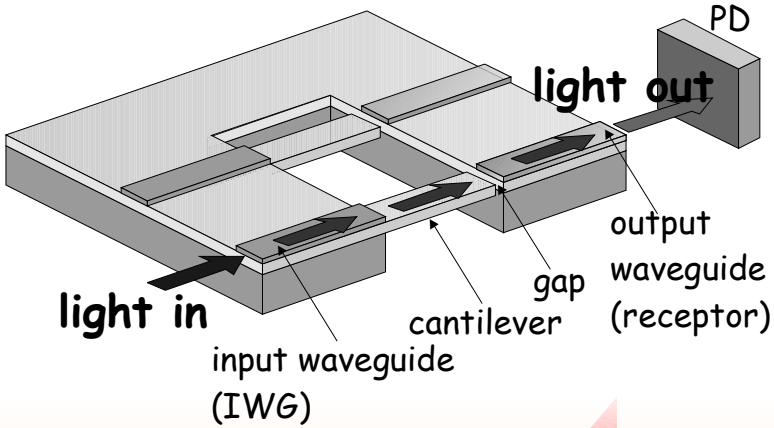
Sensors and Actuators B, 118, 2, 2006

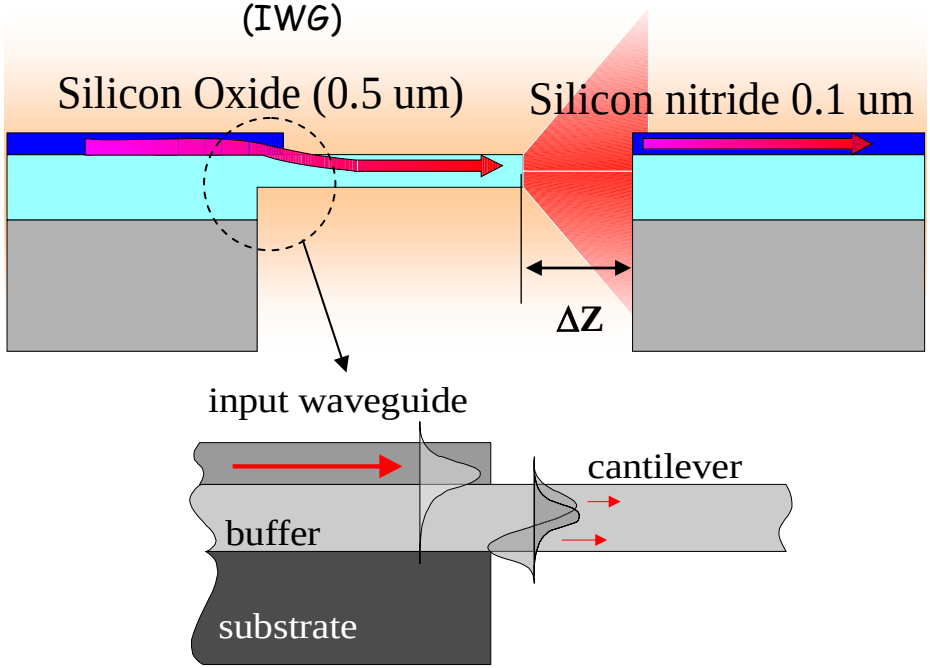
Novel optical waveguide microcantilever sensor

- No alignment (except for light coupling)
- More integrated approach
- No further adjustment
- Conventional photodetectors



OWC: Design and fabrication

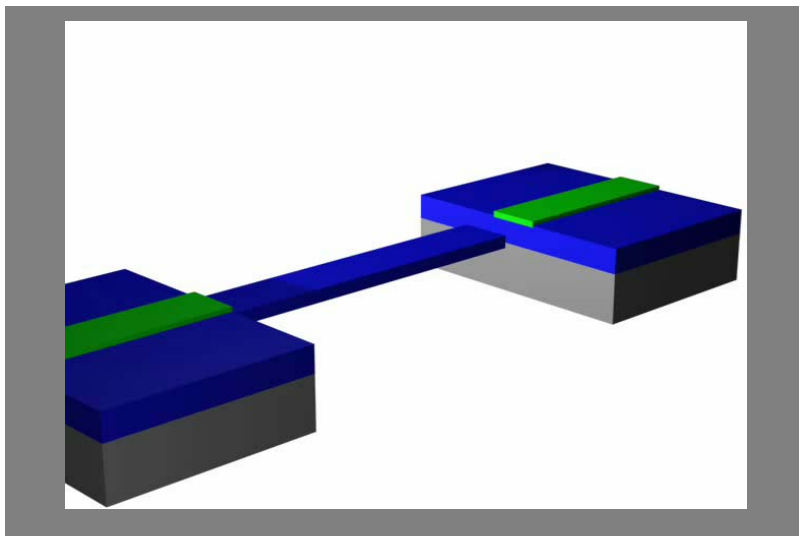




Tested materials:

LPCVD Si_3N_4, PECVD Si_3N_4, PECVD SiO_2, Thermal SiO_2

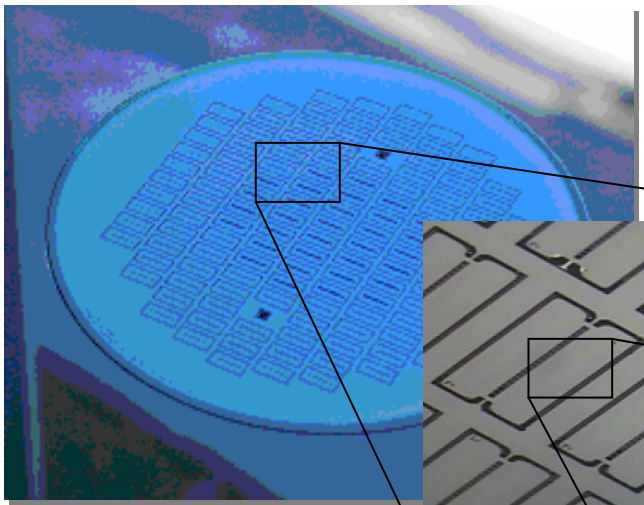
Silicon oxide cantilever, 600 nm
Silicon nitride receptor, 120 nm
Wavelength 632.8 nm
Gap: 3 μm
2 propagation modes



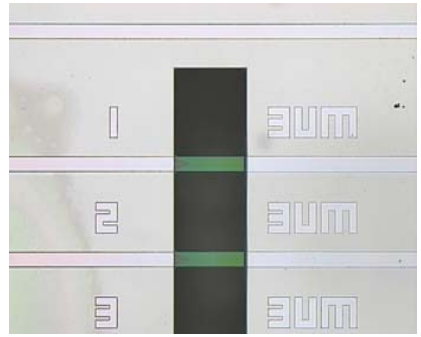
Coupling efficiency at the junction: up to 70 %

Trends in Anal. Chem (TRAC), 25(3), 196, 2006

OWC: Devices

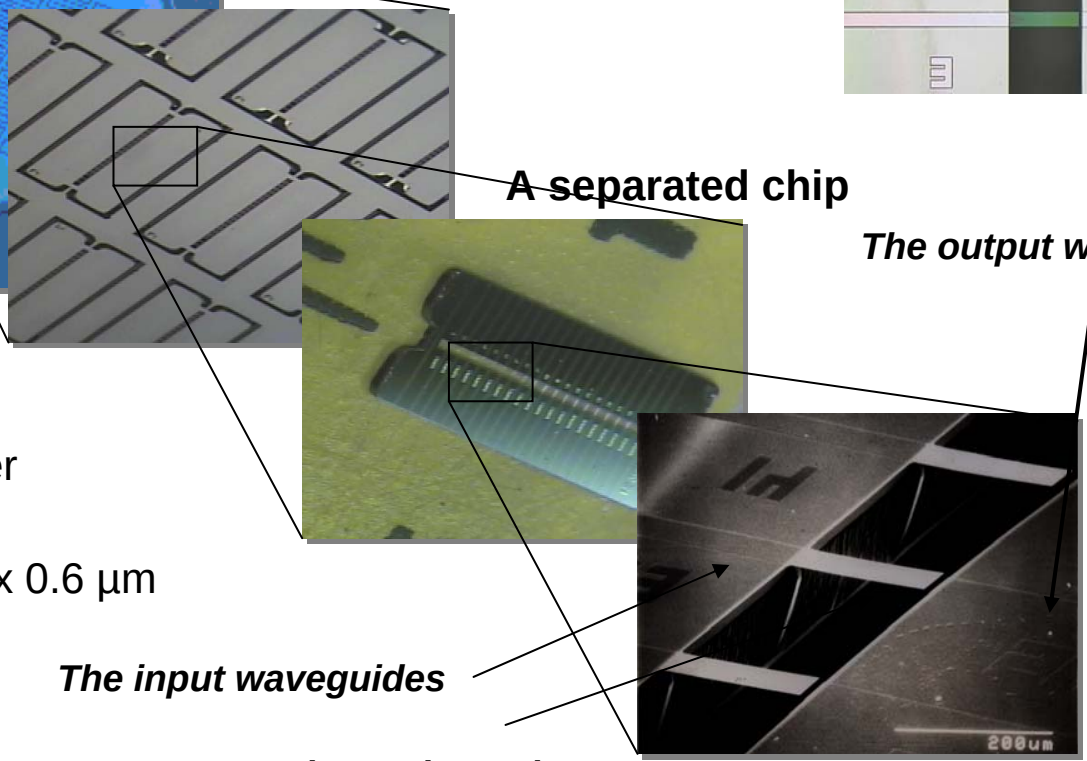


The chips on wafer



A separated chip

The output waveguides



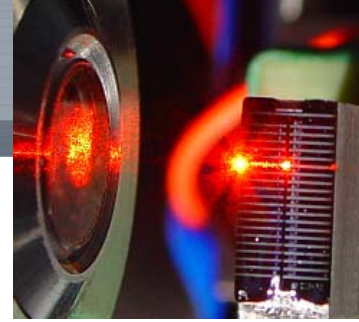
- 2500 cantilevers per wafer
- 20 cantilevers per chip
- Cantilevers are 200 x 40 x 0.6 µm
- direct incoupling
- Spring constant 0.05 N/m

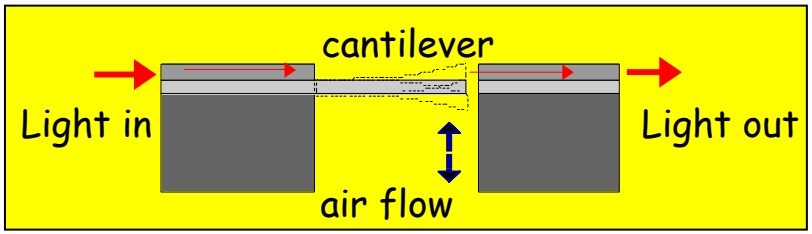
The input waveguides

The cavity and cantilevers

Applied Optics, 45(2), 1, 2006
Applied Physics Letters, 92, 011908 2008

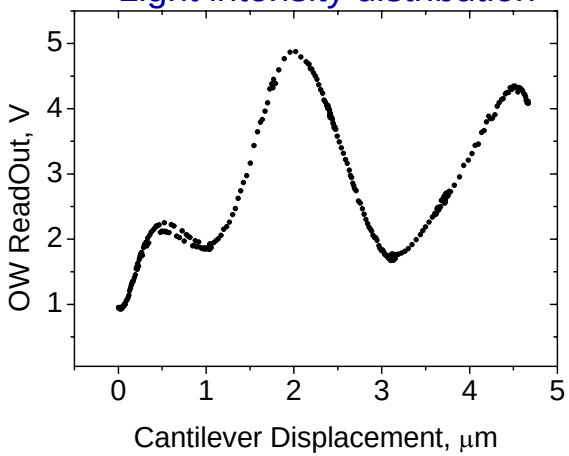
OWC: Performance

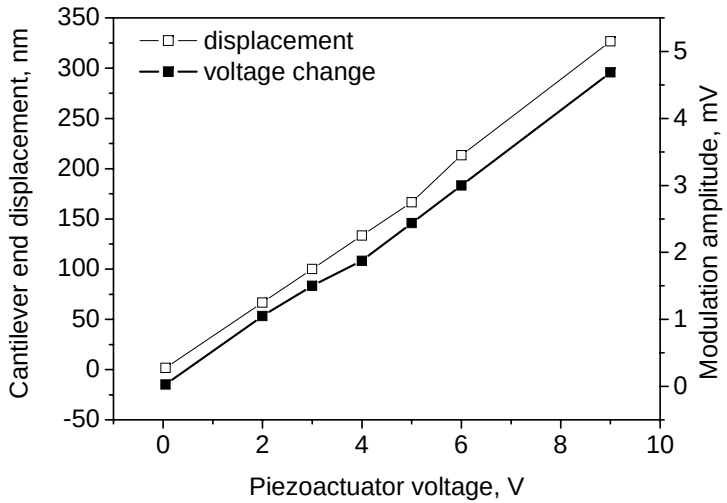




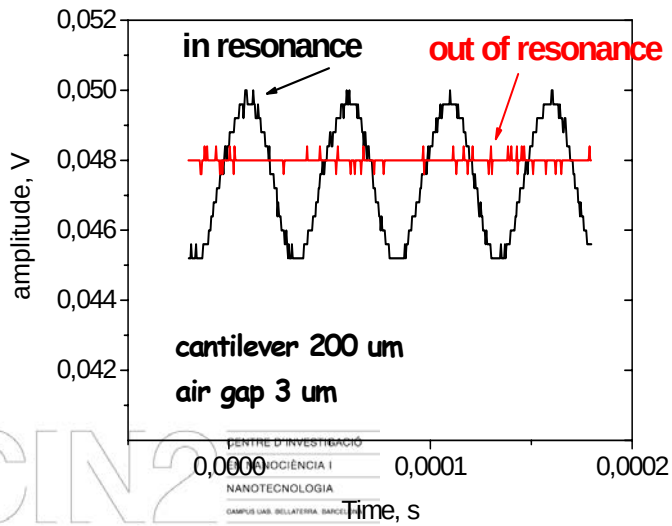
- ✓OWC chips tested in air
- ✓operated in dynamic mode

Light intensity distribution





Applying an excitation V of variable frequency and amplitude



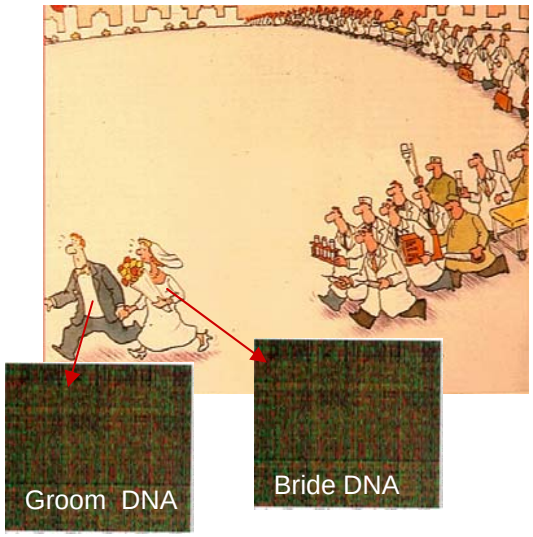
The cantilever displacement can be detected with resolution of **0.04 nm**

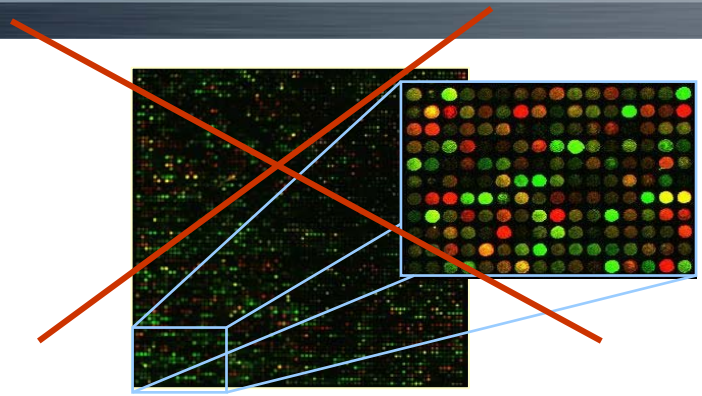
HIGH SENSITIVITY, GOOD PERFORMANCES FOR BIOSENSING

J. Lightwave Tech., 24(5), 2006

Future opportunities

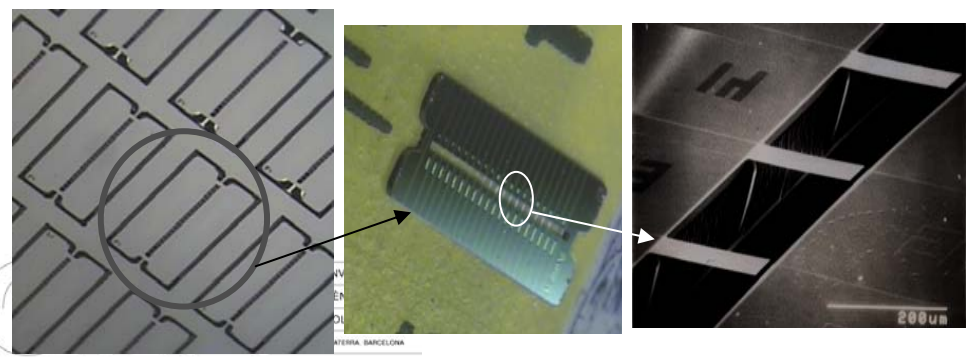
Actual DNA/Protein Biochips





- Need of high amounts of sample: (time consuming, expensive)
- Non-specific interactions
- Indirect read-out: fluorescent labeling. Labels restric assay types
- Low sensitivity for single mismatch detection
- Inconsistent activity of immobilised proteins

"Lab-on-a-chip" Nanobiosensors as an advanced platform



Array of microcantilevers

- Drastic reduction of sample amount
- **Direct read-out**: real time analysis
- High sensitivity
- Micro/nanotechnology: mass production with low cost

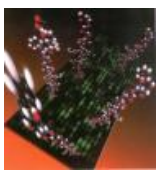
In the future.....

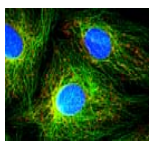
Nanobiosensores en urgencias

Tecnologías
Nanofotónica
Nanotubos, nanopartículas
Nanomecánica, NEMS

Beneficios
Datos en tiempo real e in-situ
Imagen a nivel celular
Herramientas quirúrgicas de precisión guiadas por sensores

Nanobiosensores en la consulta



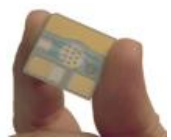


Tecnologías
Biochips
Nanoarrays de alta densidad

Beneficios
Análisis completo en minutos
Diagnósticos rápidos y precisos
Tratamientos específicos y personalizados

Nanobiosensores en casa

Tecnologías
Wireless
Dispositivos portátiles con batería
Displays de alta resolución



Beneficios
Auto-Pruebas diagnósticas simples
Transmisión automática de datos a historial clínico
